SIMATIC IPC

The more industrial PC

To enable our customers to implement tasks of increasing complexity at less risk and with less outlay, Siemens has been offering hardware and software that is both innovative and guaranteed to remain available over the long term for more than two decades. Machine and plant builders, system integrators and end customers alike benefit from the wide range of possibilities thanks to:

- Reliable industrial PCs with mainboards developed in house
- Assembly in Germany to the highest standards of quality to ensure high system availability and greater productivity
- Compact, innovative design in various construction types with higher performance and greater functionality
- Uniform front panels with widescreen displays for harmonized design of machines and plants
- Ready-to-use bundles and software packages
- Customized Automation for individual products, systems, turnkey and industry-specific solutions
- Service and support period of between 9 and 11 years for reducing the Total Cost of Ownership (TCO)

Nanopanel PC SIMATIC IPC277D with 15" and 19" widescreen displays (page 28).
Industrial Thin Client SIMATIC ITC with 12" to 22" widescreen displays for distributed solutions over large distances (page 33).
MATLAB / Simulink and WinAC S20 Wizard for rapid development, simulation and integration of complex open and closed-loop control algorithms (page 44).

The success story "Made in Germany"

Back in 1983, Siemens was the first supplier to offer standard PC technology with industrial characteristics. Since then, Siemens have continuously registered new milestones with SIMATIC Industrial PCs, for example:

- 2006 – The first industrial PC family with Intel Core2 Duo processors
- 2009 – The first and, until now, only supplier of a software controller with safety functions that has been certified by the German Technical Inspectorate (TÜV)
- 2010 – The first manufacturer of an integrated, high-end industrial PC family with new-generation i7/i5/i3 Intel Core processors
- 2011 – The first manufacturer of an embedded industrial PC family with new-generation Intel Atom processors (presented with the iF product design award in 2011 and 2012)
- 2012 – The first supplier of HMI/IPC devices with widescreen fronts (presented with the iF product design award in 2012)

With 19.5% market share in the industrial sector in 2010 (source: IMS Research 2011), Siemens is the global market leader in industrial PCs and therefore the leading systems supplier of PC-based automation.

Multimedia guide for PC-based Automation
siemens.com/video-pc-based-getting-started
Siemens responds to the constant stream of new challenges presented by rapidly expanding global markets with its consistent development of IPC platforms. The basis for this success is the excellent quality and reliability of products developed and assembled in Germany.

Siemens has more than doubled the number of PC-based systems in the field over the past 9 years to over a million devices.

Totally Integrated Automation

Rely on new productivity standards for sustained competitive advantages
To be able to respond to the increasing international competitive pressure, it is more important than ever to consistently make full use of the potential for optimization – over the complete lifecycle of a machine or plant.

Optimized processes reduce the total cost of ownership, shorten the time to market, and improve quality. This perfect balance between quality, time, and costs is now, more than ever, the decisive success factor in industry.

Totally Integrated Automation is optimally aligned to all requirements and open for international standards and third-party systems. With its six characteristic system features, Totally Integrated Automation supports the complete lifecycle of a machine or plant. The complete system architecture offers holistic solutions for every automation segment on the basis of a comprehensive range of products.

SIMATIC: more efficient and systematic automation

SIMATIC, a core component of Totally Integrated Automation, includes a variety of standardized, flexible, and scalable products – such as the SIMATIC IPCs presented in this brochure.

SIMATIC is currently considered to be the global number one in automation. One of the decisive reasons for this is that SIMATIC exhibits the six system features of Totally Integrated Automation:
- Engineering
- Communication
- Diagnostics
- Safety
- Security
- Robustness

In addition, SIMATIC features two additional system features:
- Technology
- High availability

You can find more about the system features and the resulting advantages in the following chapter “System features”.

© Siemens AG 2012
System characteristics

**Engineering**

Maximum engineering efficiency – in all phases of the lifecycle of the machine and plant
With SIMATIC you are opting for an integrated engineering environment. Efficient software supports you over the complete lifecycle of your machine or plant – from the planning and design stages through configuring and programming as far as commissioning, operation and upgrading. With its integration capability and harmonized interfaces, SIMATIC software permits a high degree of data consistency – throughout the entire engineering process.

With the Totally Integrated Automation Portal (TIA Portal) Siemens has redefined engineering. The new engineering framework TIA Portal combines the automation software tools SIMATIC STEP 7, SIMATIC WinCC and SINAMICS StartDrive in a single development environment.

[www.siemens.com/tia-portal](http://www.siemens.com/tia-portal)

**Communications**

Maximum data transparency spanning all automation levels – on the basis of well-proven standards
SIMATIC creates the foundations for unlimited integration in communication – and thus for maximum transparency on all levels, from the field and control level to the operations management level all the way up to the corporate management level. SIMATIC relies on international, cross-vendor standards which can be combined flexibly: PROFINET, the leading Industrial Ethernet standard, and PROFIBUS, the global No. 1 fieldbus.

[www.siemens.com/industrial-communication](http://www.siemens.com/industrial-communication)

**Diagnosis**

Minimization of downtimes – through efficient diagnostics concepts
All SIMATIC products feature integrated diagnostic functions with which a fault can be identified and eliminated to provide increased system availability.
Even with larger plants, the Maintenance Station provides you with a uniform view of the maintenance-relevant information of all automation components.

[www.siemens.com/maintenance](http://www.siemens.com/maintenance)

**Safety**

Protection of personnel and machinery – within the framework of an integrated complete system
SIMATIC Safety Integrated offers TÜV-certified products, which facilitate compliance with relevant standards: IEC 62061 up to SIL 3, EN ISO 13849-1 up to PL e, as well as EN 954-1.
Due to the integration of safety technology in standard technology, only one controller, one I/O, one engineering, and one bus system are required. Thus the system advantages and comprehensive functionality of SIMATIC are also available for fail-safe applications.

[www.siemens.com/safety](http://www.siemens.com/safety)
Data security in the networked world – through harmonized, scalable security systems

Due to the increased use of Ethernet connections penetrating the field level, security issues are gaining in importance in industry. For comprehensive protection of a plant, a variety of suitable measures must be implemented. These range from the company organization and its guidelines regarding protective measures for PC and control systems through to protection of automation cells by segmenting the network. Siemens follows the cell protection concept and offers, with the modules of the SCALANCE series and the Security modules, components for building up protected cells.

www.siemens.com/industrialsecurity

Maximum industrial suitability – through increased ruggedness

Each standard product from the SIMATIC range is characterized by the highest quality and ruggedness and is perfect for use in industrial environments. Specific system tests ensure the planned and required quality. SIMATIC components meet all relevant international standards and are certified accordingly. Temperature and shock resistance are defined in the SIMATIC quality guidelines, as are vibration resistance or electromagnetic compatibility.

For demanding to extreme rated conditions, special versions such as SIPLUS extreme or special versions of SIMATIC ET200 are available. These include an increased degree of protection, extended temperature ranges, and exceptional environmental stress.

More possibilities, less complexity – due to integrated technology functionality

Counting and measuring, cam control, closed-loop control, or motion control: Integrate technological tasks in many different combinations and degrees of complexity without system discontinuities into the world of SIMATIC – easily, conveniently, consistently. Parameter assignment and programming are implemented in the familiar STEP 7 environment.

www.siemens.com/simatic-technology

Maximum availability – with integrated redundancy concepts

Siemens offers a comprehensive redundancy concept to ensure high availability for the entire plant: from the field level to the control level all the way up to the management level. For example, field-tested controllers ensure high availability through bumpless switching with automatic event synchronization.

www.siemens.com/simatic-high-availability-systems
SIMATIC IPC – The more industrial PC

More ruggedness and system availability

More ruggedness and industrial suitability

Already the product design meets the high demands placed on industrial compatibility. SIMATIC IPCs stand out due to the following special characteristics:

• Mainboards developed in-house
• Rugged enclosure designs with high electromagnetic compatibility (EMC) and degrees of protection up to IP65/NEMA 4
• Integrated industrial power supplies (to NAMUR) and redundant power supplies that can be swapped during normal operation
• High-quality components with high MTBF, which also facilitate 24-hour operation even in the extended temperature range
• High vibration/shock resistance thanks to special hard disk holders
• Lockable plug connectors and card retainers
• Internal USB interface, e.g. for a software dongle
• Installed and activated Microsoft operating systems for time savings during installation
• Service-friendly, modular device design for the fast replacement of defective components
• Restore CD/DVD for restoration of the delivery state

More system availability

The consequential costs of system failures and downtimes are essential aspects when assessing an automation solution’s total cost of ownership (TCO). Thanks to their product features and numerous optional products, SIMATIC IPCs sustainably ensure a high system availability and decisively contribute to the reduction of consequential costs – for maximum productivity and efficiency.

More details on page 36.
More product diversity and selection options

SIMATIC IPCs are available with large product diversity in various designs and with different functionalities:

- Rack PCs – flexible and powerful in 19” design
- Box PCs – compact and rugged for universal application
- Panel PCs – rugged and powerful with brilliant displays

Industrial monitors and Thin Clients are available for distributed operator control and monitoring.

Special requirements are fulfilled by HMI devices with all-round protection, devices with stainless steel fronts and intrinsically safe devices for hazardous areas.

And with Customized Automation, you get individual products and systems – precisely tailored to your requirements. This saves you time, improves your profitability and increases your competitive advantage.

The integrated industrial SIMATIC IPC platforms offer a high degree of flexibility through individual selection options. For example, the following products are available on identical mainboard basis:

- The IPC227D also as a compact IPC277D with widescreen displays of 7” and above
- The IPC427C also as a compact HMI IPC477C with brilliant display
- The IPC627C also as a flexible HMI IPC677C with brilliant display
- The IPC847C also as a compact IPC647C of only two height units, and the same footprint

You can order SIMATIC IPCs in various configurations. Our online configurator supports you with selecting processors, memory configurations, drives, add-on cards and pre-installed, already activated operating systems: siemens.com/ipc-configurator
SIMATIC IPCs are employed in many applications and sectors. They are perfectly equipped and suitable for open- and closed-loop control, visualization, measuring and testing, data processing and communication tasks as well as for gateways and as network transition.

SIMATIC IPCs are playing an increasingly important role in the context of intelligent energy management.

You will find application examples animated in 3D at: siemens.com/pc-based-applications

The main applications of SIMATIC IPCs are manifold:

- Automotive industry (e.g. test bays, paint lines)
- Semiconductor and electronics industry (e.g. diffusion plants)
- Regenerative energy (solar, wind)
- Chemical and pharmaceutical industry (e.g. table presses, fermenters)
- Oil, gas and water (e.g. water treatment, water supply)
- Foodstuff industry (e.g. filling systems, fruit presses)
- Stock-keeping and logistics (e.g. high-bay warehouses, conveyor technology)
- Mechanical engineering (e.g. printing machines, textile machines, CD/DVD production)

Application examples of SIMATIC IPCs in the automotive industry

Body construction

The compact and rugged embedded HMI IPC477C with WinAC RTX software PLC and WinCC is used for control and visualization directly on the machine.

Chassis installation: HMI station

In the chassis installation plant, the compact and powerful SIMATIC HMI IPC677C is used as an HMI station for system operation and monitoring.

Engine and transmission construction

Engine and transmission construction poses high requirements in terms of EMC, dirt and heat. For monitoring and control of the test bays, the rugged SIMATIC IPC847B is employed.

Bolt data acquisition and quality control is performed locally by the maintenance-free and extremely compact embedded IPCs Nanobox PC IPC227D and Microbox PC IPC427C.

Chassis adjustment test bench

- HMI station

For the acquisition and fast processing of large volumes of data collected from roller test bays or chassis adjusting test bays, SIMATIC IPC627Cs are employed with Flat Panel monitors or HMI IPC677C with WinCC as the HMI station up to 30 meters away.

- Quality assurance

The information and data processing system for monitoring and saving quality data and machine states requires maximum performance.

The powerful SIMATIC IPC847C in a control cabinet is used for quality assurance. Large-area display of production/data quality data is possible using the SIMATIC HMI Net Panel with a 46-inch screen diagonal.
Application examples of SIMATIC IPCs in shipbuilding

Permanent vibrations, strong rolling on rough seas, and corrosive, salty climates – the electronics on ships is exposed to exceptionally harsh operating conditions. Most SIMATIC IPCs satisfy these requirements. They can therefore also be used for controlling ballast tank pumps, for example, to keep a ship level during loading and unloading.

They have the following certificates/marine approvals:
- GL (Germanische Lloyd)
- BV (Bureau Veritas)
- LRS (Lloyds Register of Shipping)
- ABS (American Bureau of Shipping)
- DNV (Det Norske Veritas)
- NKK (Nippon Kaiji Kyokai)

The flat panel monitors also have RMRS approval (Russian Maritime Register).

Application examples of SIMATIC IPCs in the food and beverages industry

Control room (MES level)
Large quantities of data have to be rapidly processed or visualized in the control room. The powerful SIMATIC IPC547D reliably handles visualization of the production line, display and recording of plant faults, recipe management, as well as the documentation of quality data.

Inspection
The SIMATIC IPC847C provides a high performance and, with up to 11 PCI/PCI-Express slots, high expandability for vision systems for fast inspection e.g. of bottles for faults, for positioning and printing of labels, or for level monitoring.

Plant monitoring and operation
- Wet area: HMI station
  The SIMATIC HMI IPC677C with WinCC visualization software and a stainless steel front is ideally suited to the wet area, e.g. for cleaning, filling and individual transportation of open bottles. Mounted on a gantry, it undertakes machine operation and monitoring, e.g. for visualizing faults or intervening for maintenance work.

- Dry area: HMI station
  The SIMATIC IPC627C reliably handles plant monitoring in the dry area as well as control of crate filling and transportation. A remote flat panel monitor connected up to 30 meters away permits plant monitoring on site.
More networking options with PROFINET onboard

The intelligent controller architecture with integrated 3-port switch facilitates the flexible and easy assembly of line or tree topologies. Integration of existing fieldbus systems, e.g. PROFIBUS, is supported.

The integrated PROFINET interface of SIMATIC IPCs can be used for:

- Direct connection of distributed I/Os and drives, for example with WinAC RTX as controller
- Use as additional standard Windows interface via the integrated switch, e.g. for TCP/IP communication or visualization applications with WinCC.
- Use of the new functions, e.g. Shared Device, Media Redundancy Protocol (MRP)

Compared to conventional solutions, PROFINET reduces costs for the installation and integration of system components by 30 to 35%.

Advantages at a glance

- The PROFINET onboard interface saves one slot, which can be used for other PC cards
- The intelligent controller architecture with integrated 3-port switch (ERTEC 400) improves the PC system performance by reducing the processor load
- Full support of the software PLC WinAC RTX and the fail-safe variant WinAC RTX F
- Optimized integration of SIMATIC IPCs in PROFINET configuration (STEP 7 and NCM-PC)
- Efficient self-diagnostics via status LEDs for eased commissioning and diagnostics

Real-time communication

PROFINET offers scalable real-time communication RT and IRT for all requirements in automation. Real-Time (RT) is used for time-critical process data – i.e. for cyclical user data or event-controlled alarms. For this purpose, PROFINET uses an optimized real-time communication channel. Its performance exceeds that of conventional fieldbuses. For especially challenging applications, there is the hardware-supported real-time communication Isochronous Real-Time (IRT) – for example for motion control applications and high-performance applications in factory automation.

Easy integration of SIMATIC IPCs in PROFINET networks over the PROFINET interface with integrated 3-port switch
More quality, safety and environmental protection

Industrial PCs from Siemens offer maximum quality due to self-developed mainboards and innovative technologies for reliable continuous operation in an industrial environment. The units and even their mainboards are manufactured in Germany. They are tested at our in-house test center to ensure reliable compliance with all technical data and specifications.

Development quality
Our experienced development teams are pursuing a common goal: The fulfillment of all customer requirements on the basis of maximum quality standards, with high long-term availability and compatibility. For this purpose, for example, we implement two test runs with 40 prototypes each. These include, e.g.:
• Stress test for CPU, graphics, memory, drives, etc.
• Measurement and validation of all important signals
During the design phase, the thermal simulation allows for the construction of devices with an optimized heat dissipation concept.

Production quality
We audit our suppliers, for example, to ensure their qualification and thus the production of industrial PCs with maximum quality and consistently good properties. Furthermore, we produce in air-conditioned halls with consistent temperature/air humidity and store components in nitrogen. Special test procedures are also used, e.g.:
• 100% x-ray test of the equipped PCB
• 100% testing of components and cables for functionality
• 100% run-in test: system test of all components, 36-hour heat test at 40 °C in climatic exposure test cabinet (this corresponds to a 6-week long-term test to avoid early failures).
• 100% final inspection of all manufactured devices
Together with the type tests which accompany series production, our customers receive products with 100% functionality which comply with all technical specifications.

Logistics quality
With a production capacity of over 100,000 PCs, our main logistics objective is the reliable adherence to delivery promises. Our uniform quality assurance concept ensures that our customers receive the product in the quality it was manufactured, e.g. by checking the packaging and transport quality.

Field quality
Maximum reliability of our SIMATIC IPCs in the field also requires optimum support during daily use. Regular inspection of the products from our production lines show that we not only observe and guarantee the CE and UL approvals, but also greatly exceed them.

Environmental protection
Environmental protection throughout the complete product lifecycle is ensured by the Siemens standard SN 36350-1 for environmentally-sound product design.

Production
Hazardous material is consistently listed in our production, environmentally-friendly alternatives are considered and replaced by new production procedures. All components and auxiliary material comply with the EU RoHS directives.

Packaging and logistics
SIMATIC IPCs are packaged and transported in an environmentally-friendly and resource-friendly way, e.g. through:
• Returnable or reusable transport packaging
• Any packaging materials can be completely recycled
• Fewer individual deliveries due to collective deliveries.

Operation
The long service life of SIMATIC IPCs reduces waste and the use of resources. Environmentally-friendly operation with low maintenance and energy costs are ensured by:
• Energy-saving mobile processors
• Fewer fans and hard disks
• Intel AMT and Wake-on-LAN functionality

Disposal
SIMATIC IPCs can be recycled and disposed of in an environmentally-friendly way, e.g. through:
• Recycling marks on metal enclosures/plastic parts
• Minimization or omitting composite material

SIMATIC IPC – See the quality
siemens.com/simatic-ipc-video-quality
More continuity and long-term availability

Experience has shown: In-house production and development have a direct influence on the quality, and guarantee reliable compliance with the high SIMATIC quality standards.

SIMATIC IPCs are equipped with selected, high-quality brand components with a high MTBF (mean time between failures). The environmentally compatible devices comply with the RoHS and WEEE directives.

Competence leads to security

Thanks to our in-house development, we are able to comprehensively cater to your wishes and realize customer-specific requirements. All our development departments are made up of experts for every PC component with close contact to our supplier partners.

Long-lasting concepts

With SIMATIC IPCs you can implement long-term concepts thanks to:
- Availability of 4 to 6 years (at least 1.5 years for IPC547D)
- 5-year repair and spare parts service (IPC547D: 3 years) after expiry of the active marketing period

This results in a total service and support period of 9 – 11 years following market launch. Upon request, you can also be provided with systems permanently tailored to a specific application, so-called design freeze systems – complete and ready for operation.

Simatic IPCs offer maximum compatibility and long-term availability with a minimum 6-month overlapping period in case of innovations and new device generations, as well as a total service and support period of 9 – 11 years following market launch.

Advantages at a glance

- We can control innovation steps more effectively and adjust them to the market requirements.
- Communication of the product roadmaps specifically and actively supports you as a user with the migration of your PC solutions.

Defined continuity

Already prior to the development of the mainboards, close coordination with the suppliers’ roadmaps is ensured.

Hardware and software compatibility

If practical, the mechanical dimensions of SIMATIC IPCs are compatible with the design of their predecessors. Together with the high compatibility of the interfaces, this provides you with the additional advantage of easy and fast integration.

You can use your existing user software on a new device without program changes over several device generations. You are still provided, e.g., with operating systems such as Windows XP, and can still even use modern software such as the SIMATIC IPC DiagMonitor under Windows 2000.

Within a device generation, SIMATIC IPCs offer a particularly high degree of image compatibility. This enables you to install the unchanged software image (operating system, drivers and application). This minimizes your adjustment expenditures.
More service and support

Whoever uses an industrial PC from Siemens has a system which operates reliably round-the-clock on 365 days of the year. To make sure this remains so, we have established an appropriate service and support concept for fast and efficient help – not only for fault cases.

Global online support

Whether important technical documentation, comprehensive FAQs, tools and downloads, or newsletters – we provide you with quick help and support around-the-clock via the Internet, together with comprehensive expertise covering all sectors and application areas of SIMATIC IPCs.

Worldwide: 24-hour availability

The SIMATIC hotline is available 24 hours a day, 365 days a year. Our engineers offer ample experience in development, system commissioning and system tests, and incorporate the development and production departments in solving your problem. They can therefore assist you even with difficult cases.

Worldwide: Always within reach

Siemens has 36 repair centers in 29 countries, and subsidiaries in 190 countries. As a user, you are thus provided with the maximum of competent support – from PC repairs in our Repair Centers down to on-site servicing.

Service tool PED – Product Equipment Data

With the PED service tool, you can identify and manage device and component data of SIMATIC IPCs/PGs online and worldwide by means of standard Internet browsers.

Your advantages with PED

- Fast and exact determination of device data (e.g. delivery date, release version, hardware equipment, spare parts, etc.) at any time
- Support with device/system documentation (e.g. through printout of device information)

siemens.com/ped

Project support

You require support with the dimensioning and options of a PC-based automation project or even engineering support? Specifically for this purpose, Siemens has established PC-based Competence Centers in China, Germany, and Italy, with experts who closely cooperate with the development department and competently support you.

siemens.com/automation/partner
SIMATIC Rack PC

Flexible, powerful industrial PCs in 19" design

SIMATIC Rack PCs are flexible industrial PC systems in 19" design with high system availability for high-performance applications.

Suitable for horizontal and vertical application, they facilitate the realization of manifold tasks:
- Measuring, open- and closed-loop control of industrial processes
- Visualization of production processes
- Image processing, e.g. within the scope of quality inspections
- Data acquisition and management, e.g. for recipe management
- Intelligent energy management
- Industrial server applications with the highest system performance/availability and data security

**Options for increased system availability**

- RAID configurations (RAID1/RAID5)
- RAID controller (onboard / PCIe x8)
- Diagnostics software: DiagMonitor
- Remote access (Intel AMT)
- Redundant power supply (AC)
- Backup software Image & Partition Creator

1) Hardware RAID controller with Zero-Maintenance Cache Protection Module (ZMM)
2) IPC547D and IPC847C
SIMATIC IPC547D – Maximum performance at an attractive price with 2nd generation Intel Core processors

SIMATIC IPC547D is a high-performance industrial PC in 19" format (4 HU). It offers maximum computing, system and graphics performance for high-speed processing of large volumes of data, e.g. in industrial image processing or process visualization at ambient temperatures up to 40 °C.

With its 7 spare PCI/PCle slots for long extension cards, it has a flexible expansion capability:
- 4 x PCI
- 1 x PCle x8 (1 lane), 1 x PCle x16 (4 lanes), 1 x PCle x16

SIMATIC IPC547D – Advantages:
- Maximum performance and fast system response:
  - Intel Core processors 2nd gen. (up to i7 with 4C/8T)
  - Powerful onboard HD graphics integrated into the CPU
  - DDR3 memory technology up to 32 GB
  - 64-bit operating systems Windows 7 and Windows Server 2008 R2
- Extremely high system availability and data security
  - RAID controller onboard for up to 3 hard disks in RAID 5 network in hot-swap frame
  - Solid-state Drive (SSD) with 50 GB (High Endurance)
  - Redundant power supply (hot-swap)
  - Front LED display for efficient diagnosis of temperature, fan and hard disks in the RAID network
- Remote access via Intel AMT (see page 37)
- High data transmission rates and redundancy thanks to two teaming-capable Intel Gigabit Ethernet connections
- Multi-monitoring with up to 4 monitors via optional PCI-Express x16 graphics card and onboard graphics
- 11 x Hi-Speed USB 2.0 ports, two of which on the front and one internal port with optional locking, e.g. for a software dongle
- Wake-on-LAN functionality for timed start-up from a central point, over the network
- High-quality industrial design:
  - Full-metal enclosure with high electromagnetic compatibility
  - High level of dust protection and low noise generation through fan-controlled overpressure ventilation

With the optional tower kit, the IPC547D can be converted for use as an industrial workstation or server in control rooms and technical offices. The minimal enclosure depth enables space-saving installation in 19" cabinets of 500 mm depth and above.
SIMATIC IPC647C – Maximum compactness and industrial functionality with Intel Core processors (i7, i5, i3)

The SIMATIC IPC647C is a rugged and extremely compact industrial PC in 19” design (2 HU). It is particularly suitable for space-saving implementation of fast computing and visualization tasks, e.g. image and data processing or industrial server applications and shipbuilding.

With a height of only 2 HU and a shallow mounting depth, it optimally utilizes the space in 19” standard control cabinets (from 500 mm).

Despite its high compactness, it can be flexibly scaled and expanded due to three long slots:
- 2 x PCI, 1 x PCIe x16 or
- 1 x PCI, 1 x PCIe x8 (4 lane), 1 x PCIe x16

**SIMATIC IPC647C/847C – One platform, many advantages:**

- High performance and extremely fast system response:
  - Intel Core processors (i7, i5, i3)
  - Powerful onboard HD graphics integrated into the CPU
  - DDR3 memory technology
- Maximum system availability and data security:
  - RAID controller onboard or hardware RAID SAS controller (PCIe x8)\(^1\) with 1 TB SAS HDD
  - Solid-state Drive (SSD) with 50 GB (High Endurance)
  - ECC RAM, work memory with error correction
  - Redundant power supply (hot-swap)
- Remote access via Intel AMT (see page 37)
- Optional PROFIBUS or PROFINET interface with three ports for cost-effective connection of distributed field devices or to couplings with SIMATIC S7
- High data transmission rates and redundancy thanks to two teaming-capable Gigabit Ethernet connections
- Multi-monitoring with up to 4 monitors via optional PCI-Express x16 graphics card and onboard graphics
- DVI-VGA adapter for analog monitor (optional)
- 7 x Hi-Speed USB 2.0 ports, two of which on the front and one internal port, e.g. for a software dongle
- Energy-efficient industrial PCs:
  - Low power consumption thanks to the latest mobile technology
  - Wake-on-LAN functionality for timed start-up of the IPCs from a central point, over the network

**Special features of SIMATIC IPC647C/847C:**

Innovative USB interface concept: This enables a USB flash drive inserted into the internal interface or at the front to be operated with the door closed, e.g. as software dongle. This offers considerable protection against misuse, also for the drives, On/Off buttons and Reset buttons that are accessible from the front.

Front LED display for efficient self-diagnostics, e.g. for simple identification of a faulty hard disk in the RAID group by HDD1, HDD2 or HDD3 ALARM (IPC647C).

---

\(^1\) Zero-Maintenance Cache Protection Module
SIMATIC IPC847C – Maximum expandability and industrial functionality with Intel Core processors (i7, i5, i3)

The SIMATIC IPC847C is a rugged and extremely expandable industrial PC in 19” design (4 HU). It offers high investment protection thanks to outstanding long-term availability and ensures reliable operation in particularly harsh industrial environments, e.g. with high dust, temperature and shock loads.

Due to its high computing power and PCI-Express technology, the IPC847C is the perfect platform for high-performance applications, for example in measuring systems, test bays, or industrial image processing applications or server applications.

The SIMATIC IPC847C is extremely flexible and expandable due to its 8 or optionally 11 free PCI/PCI-Express slots:
- 7 x PCI, 1 x PCIe x16 or
- 7 x PCI, 1 x PCIe x16 and 3 x PCIe x4

SIMATIC IPC647C and IPC847C can be flexibly implemented thanks to:
- Minimal housing depth for space-saving installation in 19” control cabinets of 500 mm depth and more
- Removable 19” brackets for use as desktop IPC, as well as an optional tower kit for the IPC847C (see page 48)
- Preparation for telescopic rail mounting for service-friendly installation in the control cabinet

Options for industrial server applications

Maximum system performance/availability and data security:
- SAS hard disks with 1 TB in RAID1/5 configuration in hot-swap frame
- Hardware RAID controller (PCIe x8) with Serial Attached SCSI (SAS) and Zero-Maintenance Cache Protection Module (ZMM)
- Monitoring of the redundant power supply (each module) and the SAS hard disks / hardware RAID controller using the SIMATIC IPC DiagMonitor diagnostics software
- 64-bit operating system Windows Server 2008 R2
SIMATIC Box PC
Compact and rugged industrial PCs for universal applicability

SIMATIC Box PCs are particularly rugged and reliable industrial PCs in compact design for universal installation in machines, control enclosures and control cabinets. They are characterized by high performance and low space requirements, ease of maintenance, as well as flexible mounting positions and assembly options.

From the ultra-compact and maintenance-free version for DIN rails, all the way to the IPC with high expansion capability and maximum performance, the compact Box PCs fulfill almost any requirements. Manifold tasks can be realized with the SIMATIC Box PCs:
• Measuring, open- and closed-loop control of process and machine data
• Industrial image processing with data acquisition and processing
• Decentralized visualization with SIMATIC Flat Panels

1) With PROFINET onboard 1 x Ethernet
Flexible installation positions and mounting options

SIMATIC Box PCs are optimized for flexible implementation in confined spaces in the switching cabinet and directly at the machine:

- For easy installation and fast cabling, all the interfaces are accessible from one side
- Versatile mounting possibilities and installation positions with retention of assured characteristics, such as ambient temperatures up to 55 °C:
  - Mounting on standard rails without tools (IPC227D/427C)
  - Flexible wall mounting with interfaces above or below
  - Space-saving portrait mounting with a small footprint
  - Side mounting with the smallest space requirement

More details on page 48.

SIMATIC IPC227D – Nanobox PC with maximum flexibility – absolutely maintenance-free – power-optimized with Intel Atom

The Nanobox PC SIMATIC IPC227D is a particularly compact and flexible embedded industrial PC. It is power-optimized with Intel Atom processors of the latest generation E6x0 and is suitable for implementing simple open-loop control, data collection or communication tasks.

The Nanobox PC SIMATIC IPC227D received the coveted if product design award for its innovative product design.

SIMATIC IPC227D – Advantages:

- Low power consumption:
  - Intel Atom processors E6x0 (power-optimized)
  - Integrated 24 V industrial power supply
  - Wake-on-LAN functionality for timed start-up from a central point, over the network

- Extremely high system availability and data security
  - Solid-state drive (SSD) with 50 GB (High Endurance), 80 GB (standard) or CompactFlash Drive
  - 512 KB non-volatile retentive memory (opt.)
  - Front LED display for efficient self-diagnostics
  - Pre-installed local diagnostics software

- High data transfer rates and redundancy thanks to two teaming-capable Gigabit Ethernet connections, one of which can optionally be used as a PROFINET interface with real-time functionality

- High degree of flexibility for interfaces and expansions
  - 4 x Hi-Speed USB 2.0 ports
  - 1 x RS232 optionally also as RS485 or CAN
  - 1 x PCIe slot (optional)
  - or 3 x additional serial interfaces (opt.)
  - or 4 x digital inputs and outputs, 24 V DC (opt.)

- High-quality industrial design for continuous use round-the-clock at ambient temperatures up to 50 °C:
  - Absolutely maintenance-free, no hard disk, no fan, and operation without a battery is possible
  - Full-metal enclosure with high electromagnetic compatibility
  - High resistance to vibration and shock
  - Dust protection
  - CE, UL, shipbuilding approvals

With a housing volume of approximately one liter and compact dimensions of 191 x 100 x 60 mm (W x H x D), the Nanobox PC SIMATIC IPC227D fits in small control boxes, as well as directly in a machine or the machine stand. All its interfaces are on one side, so the device can be cabled up easily. It can be installed with considerable versatility in four different mounting variants: standard rail, wall, portrait and side mounting.

→ More details on page 48.

The SIMATIC IPC227D is also available as a compact Nanopanel PC SIMATIC IPC277D with brilliant widescreen displays of 7” upwards.

→ More details on page 28.

The Nanobox PC with long-term availability is configurable online and is supplied with a preinstalled and activated operating system. For fast commissioning, turnkey bundles are offered complete with visualization and/or control software.

→ More details on page 46.
SIMATIC IPC427C – Powerful embedded industrial PC – ultra-compact and maintenance-free with Intel Core2 Duo processors

The Microbox PC SIMATIC IPC427C is the high-performance embedded industrial PC for standard rail, wall or portrait mounting and optimally suited for the space-saving implementation of high-speed measuring, open-loop control, closed-loop control, HMI and communication tasks, e.g., directly in the machine or on ships.

For high performance in maintenance-free continuous operation 24 hours a day at ambient temperatures of up to 55 °C it is equipped with:
• Intel processors up to Core2 Duo
• DDR3 memory technology up to 4 GB
• Intel GMAX4500 Graphics Media Accelerator
• Solid-state drive (SSD) 50 GB (High Endurance) or 80 GB (standard) and CF cards

Three PCI-104 expansion slots and a multitude of interfaces make it universally applicable.
• Two Gigabit Ethernet connections (teaming-capable) for flexible communication with the control and field levels.
• Four USB 2.0 interfaces and an optional PROFIBUS connection or a PROFINET interface with three ports for high adjustability and flexibility for measuring and open-loop and closed-loop control tasks.

Its components such as PCI-104 modules (optional), battery, RAM or CompactFlash card can easily be replaced when installed. It offers increased system availability through:
• Integrated monitoring functions for bulk storage, battery, temperature and program execution
• Front-side LED solution for efficient self-diagnostics, e.g. for the status display of critical operating states
• Integrated power supply with electrical isolation and mains failure bridging.
Process data can be reliably saved in the event of a power failure thanks to a battery-backed SRAM.

The IPC427C is also available as a compact HMI IPC477C with brilliant displays.

The SIMATIC IPC427C can be easily and flexibly expanded with a central I/O. Turnkey systems with pre-installed software are available as embedded bundles for PC-based Automation.

With the front portrait assembly kit, the IPC427C is attached to the mounting wall with its smallest surface and thus saves valuable mounting space (at ambient temperatures of up to 50 °C). When using the kit, the user interfaces are arranged on the front for improved user-friendliness.

Further mounting options:
• Portrait assembly with interfaces arranged on the bottom/top
• Wall mounting with brackets

The SIMATIC IPC427C can be easily snapped onto a DIN rail, e.g. in combination with an ET 200S.
SIMATIC IPC627C – Maximum performance in a minimum of space with Intel Core processors

The Box PC SIMATIC IPC627C impresses users with its high compactness and performance.

It is suitable for demanding measuring, open-loop and closed-loop control tasks at ambient temperatures of up to 55 °C and can be used in shipbuilding.

The Box PC SIMATIC IPC627C is now available optionally with UL certification Class I / Division 2 for operation in potentially explosive atmospheres, for example, in the oil and gas or petrochemical industry.

Despite its compact design, it can be flexibly scaled and expanded due to two slots:

- 2 x PCI or
- 1 x PCI and 1 x PCIe x16

It is also available as a compact HMI IPC677C with brilliant displays for operator control and monitoring applications.

⇒ More details on page 31.

SIMATIC IPC627C/IPC827C – One platform, many advantages:

- High performance and extremely fast system response:
  - Intel Core processors (i7, i3)
  - Powerful onboard HD graphics integrated into the CPU
  - DDR3 memory technology
- Extremely high system availability and data security thanks to
  - RAID controller onboard
  - Solid-state Drive (SSD) with 50 G8 SATA, High Endurance
  - ECC RAM, work memory with error correction
- Remote access via Intel AMT (see page 37)
- Optional PROFINET interface with three ports for cost-effective connection of distributed field devices or to couplings with SIMATIC S7
- High data transmission rates and redundancy thanks to two teaming-capable Gigabit Ethernet connections
- 4 x Hi-Speed USB 2.0 ports
- Energy-efficient industrial PCs:
  - Low power consumption thanks to the latest mobile technology
  - Wake-on-LAN functionality for timed start-up of the IPCs from a central point, over the network, e.g. after a shutdown weekend.

SIMATIC IPC627C: Connections and Expansions

All-metal housing, built-in unit, also suitable for portrait

Expansion slots:
- 2 x PCI, optional
- 1 x PCI and 1 x PCIe x16

AC power supply
120/230 V

Power switch

Optical drive:
DVD +/-R/RW

Power supply fan

1 x internal LVDS for connecting an LCD monitor

1 x DVI-I (VGA via adapter)

On/Off button

Installation slot for CompactFlash Card (accessible from outside)

COM1: Serial interface 1

4 x USB 2.0 interfaces

2 x Gigabit Ethernet connection for 10/100/1000 Mbit/s

1 x PROFINET (3 ports, optional)
SIMATIC IPC827C – Maximum performance and high expansion capability with Intel Core processors

The SIMATIC IPC827C Box PC is a rugged and flexibly expandable control cabinet PC for machine-level use in 24-hour continuous operation at ambient temperatures of up to 55 °C.

Flexible scaling and expansion thanks to five slots:
- 3 x PCI
- 1 x PCIe x16
- 1 x PCIe x4

For configuring low-maintenance systems and also those without a hard disk, the IPC827C is equipped with:
- a CompactFlash drive slot easily accessible from the outside, and
- Solid-state drive with 50 GB (SATA, High Endurance).

Features of SIMATIC IPC627C and IPC827C:
- Rugged with long-term availability and the same footprint
- High-quality industrial design with vibration/shock-absorbing hard-disk holders
- Fast diagnostics of the operating state and display of the BIOS start procedure by means of two freely programmable 7-segment displays with two additional status LEDs, e.g. for acknowledgements during data transmission.
- Fast replacement of the CMOS battery even when installed due to externally accessible battery compartment.
- Flexible installation in control cabinets with a high level of user friendliness with guaranteed properties, such as 55 °C ambient temperature, due to front/book assembly kit and mounting brackets. All function elements can therefore be accessed from the front.

More details on page 48.

SIMATIC IPC827C: Connections and Expansions

- 1 x internal LVDS for connecting an LCD monitor
- 1 x DVI-I (VGA via adapter)
- Installation slot for CompactFlash Card (accessible from outside)
- COM1: Serial interface 1
- 4 x USB 2.0 interfaces
- 2 x Gigabit-Ethernet interfaces for 10/100/1000 Mbit/s
- 1 x PROFINET (3 ports, optional)
- Freely programmable 2 x 7-segment display, 2 x LED
SIMATIC Panel PC
Rugged and powerful industrial PCs with brilliant displays

SIMATIC Panel PCs demonstrate their great strengths in machine-level operation and monitoring applications and master further tasks as powerful industrial PCs: Open- and closed-loop control, data processing and motion control are just a few examples.

Thanks to their rugged design, SIMATIC Panel PCs are ideally suited for production processes in harsh industrial environments. Operation via the touch screen or membrane keyboard meets all requirements in this application area. The rugged fronts (IP65) are equipped with luminous displays in different sizes. USB interfaces on the front facilitate start-up and service. Panel PCs of different performance classes feature the same installation dimensions, which enables you to respond flexibly to changing requirements any time.

1) Device also available with all-round IP65 protection
2) With PROFINET onboard 1 x Gigabit Ethernet
SIMATIC Panel PCs are equipped with innovative HMI fronts with high resolution and a wide viewing angle for brilliant, highly accurate display, better readability and a high degree of operating comfort. They offer a high level of flexibility in the choice of:

- Widescreen displays from 7" Touch with up to 40% more visualization area
- Widescreen devices can also be installed upright
- 4:3 displays with 12" and 15" Touch/Key and 19" Touch
- Stainless steel front with 15"
- All-round protection to IP65 with 15" or 19"
- Variants for hazardous areas, and with high luminosity for use in daylight conditions (see page 35)
- Special energy-saving variants with continuously dimmable backlighting

Devices are also available in individual, customer-specific designs for special requirements (see page 49).

SIMATIC IPC277D – Nanopanel PC
– absolutely maintenance-free – power-optimized with Intel Atom

**SIMATIC IPC277D** is equipped with brilliant touch displays of 7", 9", 12", 15" or 19" that can also be installed upright. Its rugged widescreen fronts offer more freely-configurable display area, high resolution and a large viewing angle.

With backlighting that can be dimmed by 100%, it is suitable for high-luminescence display with low power consumption.

The IPC277D is also available as a compact Nanobox PC SIMATIC IPC227D with maximum flexibility for interfaces, expansions and mounting possibilities.

The Nanopanel PC with long-term availability is configurable online and is supplied with a preinstalled and activated operating system. For fast commissioning, turnkey bundles are offered complete with visualization or control software.

**SIMATIC IPC277D – Advantages:**

- High performance at low power consumption:
  - Intel Atom processors E6x0 (power-optimized)
  - Integrated 24 V industrial power supply
  - Wake-on-LAN functionality for timed start-up from a central point, over the network
- Extremely high system availability and data security
  - Solid-state drive (SSD) with 50 GB (High Endurance), 80 GB (standard) or CompactFlash Drive
  - 512 KB non-volatile retentive memory (opt.)
  - Preinstalled diagnostics software
- High data transfer rates and redundancy thanks to two teaming-capable Gigabit Ethernet connections, one of which can optionally be used as a PROFINET interface with real-time functionality
- High flexibility in terms of interfaces
  - 3 x Hi-Speed USB 2.0 ports
  - 1 x RS232
- High-quality industrial design for continuous use round-the-clock at ambient temperatures up to 50 °C:
  - Absolutely maintenance-free, no hard disk, no fan and operation without a battery is possible
  - High electromagnetic compatibility
  - High resistance to vibration and shock
  - CE, UL, shipbuilding approvals

**SIMATIC IPC277D: Connections and expansions**

- 2 x Ethernet connections 10/100/1000 Mbit/s RJ45 (teaming-capable)
- 3 x USB 2.0 interfaces
- COM1: RS232
- CompactFlash slot
- 24 V DC PS, isolated
- 66 mm (12" device)
- Mounting depth

The Nanopanel PC SIMATIC IPC277D received the coveted iF product design award for its innovative product design.
SIMATIC HMI IPC477C – Compact, rugged, and maintenance-free in embedded technology, with Intel Core2 Duo processors

The SIMATIC HMI IPC477C in powerful Core2 Duo technology with high-performance graphics perfectly meets the requirements placed upon a rugged, maintenance-free and safe system: With its shallow mounting depth and display sizes of 12", 15", or 19", the operating portion of a machine can be precisely adjusted to the needs of the respective solution.

The SIMATIC HMI IPC477C can be used in shipbuilding and is also available with complete IP65 protection for mounting direct on a support bracket.

More details on page 34.

It is also available as a compact Microbox PC SIMATIC IPC427C with high flexibility for interfaces, expansions and mounting possibilities.

More details on page 23.

The HMI IPC477C with long-term availability is configurable online and is supplied with a preinstalled and activated operating system. For fast commissioning, turnkey bundles are offered complete with visualization or control software.

More details on page 46.

SIMATIC HMI IPC477C – Benefits:

- High performance at low power consumption:
  - Intel Core2 Duo processors
  - Integrated 24 V industrial power supply
  - Wake-on-LAN functionality for timed start-up from a central point, over the network

- Extremely high system availability and data security

SIMATIC HMI IPC577C – Industrial functionality at an attractive price with Intel Core 2 Duo processors

With its attractive price and tried-and-tested functionality, the SIMATIC HMI IPC577C is the ideal entry-level device into the class of industrial panel PCs.

Thanks to its compact design with a spare PCI slot, the device can be expanded and still be used in confined space conditions in the control cabinet or control panel.

Due to the high level of electromagnetic compatibility, the HMI IPC577C is also suitable for use at machine level. It is operated via touch screen displays of 12", 15" and 19" or keyboard variants with 12" and 15" displays.

SIMATIC HMI IPC577C – Benefits:

- High performance and fast system response:
  - Intel Core processors (low voltage)
  - Main memory expansion up to 4 GB
  - DDR3 memory technology

- High system availability and data security:
  - Solid-state drive (SSD) with 50 GB (SATA, SLC) or
  - CompactFlash drive, optionally in place of 250 GB hard disk
  - Preinstalled diagnostics software

- Optional PROFIBUS or PROFINET interface with three ports for cost-effective connection of distributed field devices or to couplings with SIMATIC S7

- High data transmission rates and redundancy thanks to two teaming-capable Gigabit Ethernet connections

- High flexibility in terms of interfaces:
  - 5 x high-speed USB 2.0 ports, one of which is arranged on the front
  - 1 x RS232
  - 1 x PCI

- High-quality industrial design for continuous use

- Round-the-clock up to 50°C ambient temperature:
  - High electromagnetic compatibility
  - High resistance to vibration and shock
  - CE, UL approvals

SIMATIC HMI IPC577C: Connections and expansions for the PROFIBUS version

Bottom view

1 x PCI expansion slot
Optical drive: DVD +/- R/RW
AC power supply 120/230 V (also available with 24 V DC)
Power switch

1 x PROFIBUS
COM1: Serial interface 1
2 x Gigabit Ethernet connection for 10/100/1000 Mbit/s
4 x USB 2.0 interfaces
1 x DVI-I (VGA via adapter)

1 x USB 2.0 interface front
Mounting depth from 84 mm
SIMATIC HMI IPC677C – Maximum performance and flexibility with Intel Core processors

SIMATIC HMI IPC677C is impressive as an open PC platform for harsh industrial conditions. Equipped with powerful Intel Core processors, it is ideally suited to demanding visualization tasks and for processing large volumes of data.

Despite its compact design, it can be flexibly scaled and expanded due to two slots:
- 2 x PCI or
- 1 x PCI and 1 x PCIe x16

The SIMATIC HMI IPC677C is equipped with brilliant displays in sizes 12", 15" or 19" with an attractive front design. Operation is realized via the touch screen or the keys. A version without display is available as Box PC SIMATIC IPC627C.

⇒ More details on page 24.

The HMI IPC677C is approved for shipbuilding.

The 19" touch variant is now also available with explosion protection. An INOX variant with a 15" touch display is available for implementation in the food and beverages industry.

⇒ More details on page 34.

SIMATIC HMI IPC677C – Benefits:
- High performance and extremely fast system response:
  - Intel Core processors (i7, i3) and main memory expansion up to 8 GB
  - Powerful onboard HD graphics integrated into the CPU
  - DDR3 memory technology
- Extremely high system availability and data security:
  - RAID controller onboard
  - Solid-state drive (SSD) with 50 GB (SATA, SLC)
  - ECC RAM, work memory with error correction
  - Retentive data memory for storing the process data after a voltage drop
- Remote access via Intel AMT (see page 37)
- Optional PROFIBUS or PROFINET interface with three ports for cost-effective connection of distributed field devices or to couplings with SIMATIC S7
- High data transmission rates and redundancy thanks to two teaming-capable Gigabit Ethernet connections
- 5 x high-speed USB 2.0 ports, one of which is arranged on the front
- Energy-efficient Industrial PC:
  - Low power consumption thanks to the latest mobile technology
  - Wake-on-LAN functionality for timed start-up of the IPC over the network, e.g. after a shutdown weekend.

Freely accessible battery compartment for fast replacement of the CMOS battery
Distributed operator control and monitoring with Flat Panel Monitors and Thin Clients

SIMATIC offers two different design concepts for industrial PC-based visualization and control solutions requiring a spatially divided setup of the operator panel and the industrial PC or server: SIMATIC Flat Panel Monitors for small-scale separated solutions over a distance of up to 30 meters and Industrial Thin Clients SIMATIC ITC, for single, or multiple operator stations, separated over unlimited distance over Industrial Ethernet.

SIMATIC Flat Panel Monitors – Distributed operation and monitoring with quick response times

SIMATIC Flat Panel Monitors are available as displays only, or with touch screen operation in sizes of 12”, 15” and 19”, as well as 12” and 15” with key operation.

The devices can be separated from the industrial PC at distances of up to 30 m via a DVI or VGA interface and offer quick response times for no-lag image refreshing, e.g. for inching or curve display. They are designed for operation at high levels of vibration or shock, as well as in dusty and humid atmospheres. The 19” devices are ATEX-certified and are approved for use in marine engineering.

Central administration of several operator panels on one server and easy cabling of the low-cost and maintenance-free Thin Clients over almost unlimited distances makes client-server solutions particularly inexpensive and versatile.

Industrial Thin Clients SIMATIC ITC with widescreen touch displays in sizes 12”, 15”, 19” and 22”, with the if product design award

The Industrial Thin Clients have the same attractive front design in widescreen format as SIMATIC Nanopanel PCs and HMI Comfort Panels. This presents a uniform, high-quality look for machines and plants.

Powerful and rugged in widescreen format

The new Industrial Thin Clients SIMATIC ITC are available with widescreen touch displays in the sizes 12”, 15”, 19” and 22”. The powerful devices are equipped with a 1.2 gigahertz Intel Celeron processor, a 512 megabyte main memory with DDR3 storage technology and a Gigabit LAN interface for fast communication with other systems. A 24 V power supply is integrated as well as two USB interfaces for connecting a mouse and keyboard.

SIMATIC ITCs are extremely rugged and maintenance-free, because they have no wear parts such as fans or hard disks and feature rugged cast aluminum fronts: Ideal for machine based operator control and monitoring in the industrial environment. You will find information on an all-round IP65-protected version on page 34.
Versatile communication

SIMATIC ITCs can be operated at an almost unlimited distance from the industrial PC or server over PROFINET or Industrial Ethernet. The Gigabit LAN interface ensures fast communication that is either conducted by means of standard protocols, such as Remote Desktop (RDP) or Virtual Network Computing (VNC) to a PC or via Sm@rtServer, for example, to a SIMATIC HMI Panel. Web-based applications can be operated using the integrated web browser functionality of the ITC.

RDP is included in almost every Microsoft operating system today, so a server can be accessed or remotely operated from a single Thin Client once RDP has been activated.

When RDP is used with Windows server operating systems, it is also possible to operate several Thin Clients on a single server. The principle: The applications which can be accessed by the clients are defined on the server. The clients can then connect themselves automatically to the applications released on the server.

With VNC, however, two or more operator panels can display a “cloned” desktop with identical screen content. Depending on the connection, the server can be, for example, a SIMATIC HMI Comfort Panel or a SIMATIC IPC. Two or more Thin Clients can be operated depending on the server’s performance.

With the multi-session function, parallel connections are possible to several servers with fast switchover, e.g. two computers connected to one Thin Client. For high availability, connections can also be configured to redundant servers in RDP mode. A user-friendly setup wizard supports quick and easy commissioning and integration in existing networks.

Siemens offers the SmartServer for system-wide communication with all HMI operator stations. With this inexpensive solution for additional WinCC workstations, several users can operate safely in a coordinated manner by means of command interlocks.

Web-based content can be displayed by using the Thin Client as a Web Client, e.g. for diagnosis of the Siemens devices on the network via a diagnostics website. The mirroring function enables display contents to be accessed directly from the control room, e.g. to support the on-site operator.

SIMATIC ITS are ready to use and quick to configure. The new version of the software tool Remote Configuration Center (RCC) performs central device management for several Thin Clients, for example, for easy IP address assignment or for firmware update installation in parallel.

Flat Panel Monitor or Thin Client?

Numerous operating concepts can be implemented with both configurations. There are, however, a few points that favor one solution or the other:

- Flat Panel Monitors are used for:
  - Fast image construction, e.g. for curve display, 3D data or videos
  - Very short operating times, e.g. for inching mode
  - Commissioning of the IPC directly in the plant, or changing the BIOS settings
- Thin Clients are used for:
  - Slower image construction
  - Longer distances to the PC or server
  - Multiple operator stations and servers

SIMATIC Flat Panel Monitors and Thin Clients for maximum flexibility with distributed operator control and monitoring
Device variants for special requirements

All-round protection and stainless-steel fronts

The HMI devices with all-round protection supplement the portfolio of the tried and tested built-in units with especially rugged operator panels in an attractive design. The devices are dimensioned for support bracket or stand assembly and offer an overall IP65 protection.

Panel PCs with stainless steel front are designed for use in the food and beverages industry. They are characterized by easy cleaning and disinfection, high resistance, splitter protection of the display and high degree of protection.

Completely protected HMI devices

The series is technically based on available built-in devices:
• SIMATIC HMI IPC477C PRO 15" and 19"
• SIMATIC Flat Panel Monitor PRO 15" and 19"
• SIMATIC Thin Client PRO 15"

The devices can be mounted on various support bracket and stand systems via a flexible mechanical system. Thus they can be optimally used on machines without requiring a control cabinet. This facilitates ergonomic operation at various positions in systems or production lines. The devices are connected to support bracket systems from different manufacturers by means of adapters, optionally on the top or bottom of the device. Both options are provided as standard.

Due to their low weight, the HMI devices with all-round protection can be mounted easily and quickly. The backplane can be removed easily – e.g. for subsequent installation of cables or replacing memory cards – and thus ensures a high degree of service friendliness even when the device is already mounted on the machine.

The HMI devices with all-round protection offer modular expansion capability. The corresponding expansion units can be attached on left or right side of the operator panels.

This way, the system can be easily expanded with plant-specific mechanical buttons or other add-on units (e.g. Emergency Stop) and thus adjusted to many different requirements. The degree of protection IP65 is retained for the entire system even after installation.

Advantages at a glance

- Operator panels with all-round IP65 protection for mounting on support arms or stands
- Removable backplane hood for optimum service friendliness
- Maximum compactness and low weight for easy mounting
- Easy adjustability to changing requirements thanks to modular expansions

SIMATIC HMI IPC677C 15" Touch INOX

The HMI IPC677C can also be customized as an ergonomic operator station to a high degree of protection (up to IP66K all-round) built into a stainless-steel control box.

Intrinsically safe SIMATIC Panel PCs and Thin Clients

Rugged SIMATIC Panel PCs and thin clients are now available in an intrinsically safe version for hazardous areas in Ex Zones 1/21 and 2/22. They can be used with flammable gases, vapors and dust/air mixtures, in the manufacturing of petrol, medicines and cement and in the processing of flour and grain, as well as in shipbuilding.

SIMATIC HMI Panel PC Ex and SIMATIC HMI Thin Client Ex can be implemented without special measures, such as costly enclosures or additional certification procedures, directly in hazardous areas of Zones 1/21 and 2/22. The devices are highly resistant to vibration and shock and are certified for use in shipbuilding. The chassis devices feature a high degree of protection of IP66 at the front and IP65 at the rear for direct implementation outdoors at ambient temperatures from minus 20 °C to plus 50 °C. For use down to minus 30 °C, an enclosure with heating is available as an option.

SIMATIC HMI Panel PC Ex

The rugged Panel PC is equipped with a 1.6 GHz Intel Atom processor and offers high-performance computing with heat losses of only 2.5 W. The device operates without a fan, rotating bulk memory and battery and is therefore completely maintenance-free.

Manifold configuring options

- 15” or 19” displays with touch screen functionality and eight function keys. The 15” device is available as an option with an especially brilliant display for use in daylight.
- CompactFlash cards with 4 or 16 GB, 100 GB hard disk
- Ethernet networking is available either electrically over copper cables at 10/100 Mbit/s (Ex e) or optically over fiber-optic cables at 100 Mbit/s (Ex op is)
- Windows XP Professional or XP embedded operating system
- Stainless-steel enclosure for different mounting possibilities

The following are available as accessories:

- Digital KVM Box for monitor operation of the SIMATIC HMI Thin Client Ex
- USB drive, intrinsically safe, 16 GB
- USB drive, intrinsically safe, 16 GB, with recovery function
- USB drive, 16 GB, with recovery function
- Ethernet switch with FOC
  - 4 x 100 Base Tx
  - 1 x 100 Base Fx (MTRJ) Ex op is

SIMATIC HMI Thin Client Ex

SIMATIC HMI Thin Client Ex can be connected as a thin client or monitor over Ethernet at an almost unlimited distance from the associated computer unit.

In thin client mode, the remote protocols RDP or RealVNC are used for communication with the server.

In monitor mode, the PC is connected over a digital KVM box for keyboard, video and mouse signals which can communicate over Ethernet either directly or via a switch with the remote HMI station in the hazardous area.

Advantages at a glance

- Can be used directly in hazardous areas of Zones 1/21 and 2/22 without special measures
- Extremely rugged and totally maintenance-free for use directly at the machine, outdoors and in shipbuilding
- Brilliant 15”/19” displays with touch screen functionality and function keys, as well as a 15” display for use in daylight
- Flexible configuration and easy integration in the existing infrastructure
Individually expandable system availability

The rugged design and high industrial suitability make SIMATIC industrial PCs highly available. For applications with individual system availability requirements, we offer a matched range of optional expansion components. This enables you to detect potential failures early and to effectively minimize actual downtimes.

Avoiding potential failures – to prevent the damage from happening

Options for the prevention of potential failures include:
- Uninterruptible power supplies (UPS)
- Redundant power supply (see rack PC from page 16 onwards)
- Flash disk and SSD as safe bulk memory
- RAID1/RAID5 configuration

SIMATIC IPC DiagMonitor – intelligent and comprehensive diagnostics, local or remote

To allow early detection of potential failures in the field, the SIMATIC IPC DiagMonitor software tool provides intelligent and comprehensive diagnostics and signaling functions which allow you to carry out preventive maintenance in due time.

Remote Management through remote access to industrial PCs – with SIMATIC IPC Remote Manager

With the new SIMATIC IPC Remote Manager software package and the Intel AMT functions of the SIMATIC IPCs with Intel Core processors i7/i5, central server concepts can be implemented using password-protected remote access. These support fast, low-cost maintenance, fault rectification and management.

Minimization of downtimes – to get your system up and running again quickly

Once a system has come to a standstill due to a fault, it is of the essence to minimize such downtimes and the respective costs. SIMATIC IPCs therefore offer expansion options to rapidly restore your system’s operability.

These include:
- Software for preventative data backup and efficient partition management, SIMATIC IPC Image & Partition Creator
- Second hard disk
- BIOS data management software SIMATIC IPC BIOS Manager
Remote Management through remote access to industrial PCs – with SIMATIC IPC Remote Manager

SIMATIC IPCs with Intel Core processors i7 and i5 are equipped with the Intel Active Management technology (Intel AMT) for password-protected remote access. With the SIMATIC IPC Remote Manager, you save time and money with maintenance and management.

SIMATIC IPC Remote Manager can be used to implement central service concepts in which SIMATIC IPCs can be remotely accessed by means of AMT functions. System or program errors can be rectified, or BIOS and program updates can be implemented without the need for on-site deployment.

Advantages at a glance
- Central service without on-site deployment
  - Remote access via password-protected HTTPS or TLS link, without additional hardware and independently of the operating system
  - Easy rectification of errors in the software, applications or operating system
  - Rapid implementation of BIOS and program updates with a subsequent restart
- Efficient energy management and service management
  - Reduced power consumption and costs due to timed coastdown, e.g. following production stop or over the weekend.
  - Reduced downtimes and costs since start-up and service work is performed outside the normal production times

Overview of functions

Keyboard Video Mouse Redirection (KVM)
The keyboard-video-mouse signal can be redirected to or from a computer in the IT department, so that an administrator can operate the computer remotely without additional hardware.

Remote reboot
The distant computer can be rebooted from a local drive, CD or a network drive. This saves the service engineer time-consuming and expensive traveling.

Remote Power Control
You can reduce the energy/operating costs with targeted switching on and off. The computer can be shut down at night or at the weekend, or it can be switched on temporarily for an update. A reset is possible at any time.

IDE redirection
To prevent time-consuming handling, for example, an ISO file located on a hard drive of the IT Management Console can be made available as a CD-ROM drive.

Notes on security
Suitable protective measures (including IT security such as network segmentation) should be taken in order to ensure safe operation of the plant. For more information on the topic of industrial security, go to siemens.com/industrialsecurity

Configuration example on the Internet at: siemens.com/simatic-ipc-remote-manager
SIMATIC IPC DiagMonitor
Intelligent and comprehensive diagnostics – local or remote

The SIMATIC IPC DiagMonitor detects possible hardware and software faults. It monitors, signals and visualizes the operating states of SIMATIC IPCs both locally and remotely. You are thus able to prevent downtimes and reduce the respective costs by taking preventive measures at an early stage.

DiagMonitor alerts the user, automatically executes programs and logs all events. This way, faults are rapidly detected and potential system failures efficiently prevented. The diagnostics messages are automatically forwarded to the user via LAN, e-mail or text message, or via OPC for direct alarm infeed in software applications (e.g. WinCC flexible, WinCC, WinAC and other OPC-capable software).

SIMATIC IPC DiagMonitor monitors, signals and visualizes the operating states of SIMATIC IPCs both locally and remotely.
The DiagMonitor Web server lets you view and manage the data of the stations monitored by the SIMATIC IPC DiagMonitor independent of the location, PC architecture and operating system via an Internet browser over an http or https link. Access rights to the monitoring data can be individually assigned and managed for the users.

The time synchronization function integrated in DiagMonitor facilitates operation of the industrial PCs without CMOS battery. This additionally reduces the maintenance costs.

Web server display: Online monitoring of all fan speeds (CPU and enclosure fans) as well as signaling and visualization of exceedance/shortfall or fan failure via Internet browser.

Example: Operating hours counter

Using the operating hours counter, you can define the maintenance intervals not just for your SIMATIC IPC, but also for further devices in your plant. You are thus informed on the dates for preventive maintenance measures in due time, e.g. replacement of the dust filter of the industrial PC or filter change of a pump.

Example: Text message and alerting functions

The SIMATIC IPC DiagMonitor automatically signals, among others, overshoot/undershoot of the permissible operating temperature. For example, an alarm via text message informs the servicing personnel of a violation of the permissible processor temperature caused by contaminated filter mats.

Advantages at a glance

Productivity increase – through the prevention of potential failures

- Central diagnosis of networked SIMATIC IPCs over Ethernet or Webserver (http/https)
- Diagnostics and signaling functions for PC temperature, fan, hard disks (SMART), RAID, CompactFlash, SSD, system status (watchdog)
- Operating hours counter for preventive maintenance
- Recording and evaluation of operating data;
- Integrated log function, comprehensive text messages and online help in German and English
- Own information per Web business card on:
  - Device data e.g. product designation, BIOS version, mainboard number
  - System status

Reduced costs – thanks to reduced downtimes

- Fast information via e-mail, text message and in the application via OPC and SNMP
- Individually configurable actions upon occurrence of a fault, e.g.:
  - Execution of programs, e.g. calling of the Storage Manager in the case of RAID faults
  - Restart for controlled shutting-down and restarting of the computer

Notes on security

Suitable protective measures (including IT security such as network segmentation) should be taken in order to ensure safe operation of the plant. For more information on the topic of industrial security, go to siemens.com/industrialsecurity
Avoiding potential failures – to prevent the damage from happening

SIMATIC IPC expansion options offer protection against unnecessary consequential costs, e.g. caused by data loss, and ensure the continuously high availability of your plant.

Uninterruptible power supplies (UPS)

The rugged SIMATIC IPC power supply units back up voltage dips for up to 20 ms (acc. to NAMUR). SITOP DC UPS 24 V is available for longer power outages, as well as customized built-in UPSes. Advantage: The system can reliably save important data and shut down in a controlled manner.

SITOP UPS500 is based on high-capacitance capacitors. The maintenance-free DC UPS is available as a compact rail-mounted device (can be combined with IPC227D/427C) and with IP65 degree of protection for distributed setup, e.g. for mounting on a support arm of a SIMATIC Panel PC. Advantages:
- Long service life and reliable operation at temperatures of up to 60 °C
- Control cabinet does not have to be ventilated
- Safe coast down and correct restarting
- Software tool supports further processing and responses from the IPC

Further information:
siemens.com/sitop/ups

RAID1/RAID5 configuration

SIMATIC IPCs with RAID1/RAID5 configuration ensure increased data security: Data continues to be available, even if a hard disk fails. Loss of data is thus avoided, the system continues to be operational, and the hard disk can be replaced during operation. The onboard RAID controller saves one slot, which can be used for other cards.

For industrial server applications with stringent demands on availability and performance, RAID 1 and RAID 5 configurations with hardware RAID controllers with Zero-Maintenance Cache Protection Modules (ZMM) and SAS hard disks are also available (see page 19).

RAID1 configuration (mirror disk system)

All data is saved in parallel on two hard disks by means of automatic mirroring. The advantages are:
- Very secure and user-friendly due to automatic mirroring
- After replacing a defective hard disk, the mirror disk system can be restored in just a few steps.

RAID5 configuration (block striping with distributed parity)

All data and parity information are saved on at least three hard disks. The advantages are:
- High security thanks to redundant data storage
- Good utilization of the available storage space

RAID5: High degree of data security and memory utilization through separate drives and "block striping with distributed parity".

Flash disk and SSD as safe bulk memory

System availability can be further increased with a CompactFlash drive CFC or Solid State Drive (SSD) instead of a hard disk. These rugged bulk memories are approved for higher vibration, shock and temperature values and offer an availability which is significantly higher than that of a hard disk. They provide safe protection for your operating system and application.

The SIMATIC IPC CompactFlash cards with up to 16 GB capacity and solid-state drive with 50 GB (High Endurance), 80 GB (Standard) are system-tested with SIMATIC IPCs.

The new SIMATIC IPC CompactFlash cards with diagnostics capability can be diagnosed and monitored using the SIMATIC IPC DiagMonitor diagnostics software. By setting of the diagnostics bit, users can be informed of the need for preventive maintenance in due time.
Minimization of standstill times – so that your plant gets up and running again quickly

Once a system has come to a standstill due to a fault, it is of the essence to minimize such downtimes and the respective costs. SIMATIC IPCs therefore offer expansion options to rapidly restore your system's operability.

SIMATIC IPC Image & Partition Creator – for data backup and partition management

SIMATIC IPC Image & Partition Creator supports you with organizing and data and partitioning SIMATIC IPCs. You can then back up data easily and restore it as well as manage partitions efficiently.

• Back-up of the hard disk image during normal operation ¹ on an additional storage medium (2nd hard disk or CF card, integrated burner, USB/network drive) or restoration from this drive to a hard disk.
• Comfortable duplication of complete software fillings (cloning) of devices with the same equipment and application purpose allows for the fast replacement of complete devices in service cases.
• Reliable erasing of confidential data before disposing of data carriers.
• Expansion and reduction of existing system and data partitions without loss of data as well as creation of new and deletion of existing partitions.
• The software can be operated without the need for specialist knowledge. Wizards provide support for all functions. The function “1ClickImage” can be used to create an image or restore it with just a double-click after the initial configuration.
• The internal version management of the Image & Partition Creator manages up to nine versions of an image. The size of the images can be adapted, if required, for burning onto CDs.
• Flexible in the application thanks to:
  – Direct starting from the CD or USB FlashDrive
  – Booting of the program from the CD or bootable USB FlashDrive
  – Installation and execution via an icon.
• SIMATIC IPC Image & Partition Creator can be used independently of the type of operating system in the system to be processed, without additional drivers and without the need for installation on SIMATIC IPCs – also in service mode.

¹) Depending on operating system and application
Minimization of standstill times – so that your plant gets up and running again quickly

Second hard disk – as a storage location for data and image backups

SIMATIC IPC647C with a second hard disk

To increase the system availability you can use a second hard disk in a non-RAID system:

- As a storage location for data and image back-up facilitating easy and fast restoration using SIMATIC IPC Image & Partition Creator.
- As a back-up disk, so that the system can be used again immediately, in the case of a defective software installation or hard disk defect, by booting from the back-up disk set up by the SIMATIC IPC Image / Partition Creator.

SIMATIC IPC BIOS Manager – for safe and easy BIOS data management

Easy and secure BIOS data management under Windows PE

With the SIMATIC IPC BIOS Manager software tool, BIOS data of SIMATIC IPCs can be processed under Windows PE. The functionality includes the reading of and storing of BIOS CMOS data in a file and copying back of the saved BIOS setup data to the BIOS.

The SIMATIC IPC BIOS Manager offers you the following advantages:

- Easy and reliable duplication of configured CMOS data on further SIMATIC IPCs of the same design
- Simply archiving of PC system data for quality management requirements
- Straightforward implementation of BIOS updates/BIOS restorations
- Storing of an inventory number for the device

You receive the software tool SIMATIC IPC BIOS Manager pre-installed and ready to use on the practical SIMATIC IPC Service USB FlashDrive.

More details on page 47.
PC-based Control and HMI software

Software options for operation and monitoring

A range of hardware and software options is available for PC-based automation. Optimum interaction of these options and SIMATIC IPCs is guaranteed as a result of joint development and comprehensive system tests.

SIMATIC WinCC (TIA Portal) – Innovative HMI software

SIMATIC WinCC in the Totally Integrated Automation Portal (TIA Portal) is part of a new, integrated engineering concept which offers a uniform engineering environment for programming and configuration of control, visualization and drive solutions.

WinCC in the TIA Portal is the software for all HMI applications ranging from the simplest operation solutions with Basic Panels to SCADA applications on PC-based multi-user systems.

Maximum configuration efficiency

Compared to its predecessor, WinCC flexible, configuration efficiency has been further increased, particularly if further TIA components such as the SIMATIC S7 Controller are part of the automation solution.

The perfect interaction with STEP 7 in the TIA Portal prevents multiple entries and guarantees consistent data management at all times. All the common functions are uniform – also in terms of their presentation on the screen.

User benefits range from intuitive operation through the editors’ integrated intelligence to the advantages of a shared database, which ensures maximum transparency and absolute consistency.

SIMATIC WinCC V7 – Scalable process visualization with plant intelligence

SIMATIC WinCC is a price- and performance-graded process visualization system for all sectors even up to the pharmaceutical industry where appropriate options comply with the requirements of 21 CFR Part 11. WinCC offers SCADA functionality – from single-user down to distributed multi-user systems with redundant servers and cross-location solutions with Web clients. In particular, WinCC is characterized by absolute openness. Via open interfaces, system houses can develop individual applications and install system expansions on WinCC. With the integrated process database, WinCC forms the information hub for company-wide, vertical integration.

WinCC offers you the following advantages:
- Universally applicable
- Solutions for all sectors
- Meets requirements according to 21 CFR Part 11
- Multilingual for worldwide use
- Can be integrated in all automation and IT solutions
- Can be configured easily and efficiently
- Continuously scalable – also via the Web
- Open standards for easy integration
- Integrated MS SQL server for data archiving as information hub
- Increased production transparency through Plant Intelligence
- Expandable using options and add-ons

SIMATIC WinCC can be operated with server functionality on Windows Server 2008. This possibility exists for the SIMATIC Rack PCs.
Software options for open-loop control

PC-based control with SIMATIC WinAC RTX

WinAC RTX enables control on the PC. The WinAC RTX software controller is used when high performance, high data volumes and at the same time hard real time are required. The optimized runtime system supports the processing of extensive and demanding PC applications in parallel with the control task. It executes on the operating systems Windows XP Professional, Windows Embedded Standard 2009/Standard 7 or Windows 7 and uses a real-time core for real time and deterministic behavior.

WinAC RTX uses the latest innovations for SIMATIC Controllers in the communication over PROFINET. Particular features are the isochronous mode over PROFINET and IRT and the web-server functionality. Isochronous mode is used for extremely fast and accurate automation solutions. Input signals are acquired, processed and output at fixed intervals. The web server automatically generates web pages, that can also be used for remote diagnostics, and permits access to a plant from any PC with the relevant authorization.

Use of SIMATIC know-how

WinAC RTX is programmed with the usual SIMATIC programming tools – with STEP 7 or, if required, also with the field-proven engineering tools, such as the IEC 61131-3-compliant languages S7-SCL or S7-GRAPH. WinAC RTX is code-compatible with SIMATIC S7, i.e. program modules created for SIMATIC S7-300 and S7-400 can be reused in WinAC RTX and vice-versa.

Fail-safe variant SIMATIC WinAC RTX F

With WinAC RTX F, a TÜV-certified (German Technical Inspectorate), fail-safe software controller for safety-oriented applications is available. The S7 Distributed Safety software (a STEP 7 option) is used for programming the fail-safe program. The PROFIsafe profile permits fail-safe communication via PROFIBUS DP and PROFINET IO.

Openness and know-how protection

WinAC RTX is open to integration of technological applications, such as barcode readers, image processing, measured value acquisition and numerical controls. C/C++/C# programs can also be integrated into the WinAC RTX control program. Extremely flexible solutions can therefore be generated with access to all the hardware and software components of the PC. C / C++ / C# is frequently used to program complex technology functions. These often contain valuable know-how. C/C++/C# encapsulates these programs. The openness of WinAC RTX can therefore also be used to protect the know-how in customized functions.

Integration of complex closed-loop controllers with MATLAB/Simulink

With the software MATLAB/Simulink from The Mathworks, processes and PID controllers can be modelled graphically and simulated. With Embedded Coder, the Simulink subsystems can be translated into C/C++ code. This code can be integrated into a WinAC ODK project and can be called and executed from the S7 program using DLL/RTDLL.

Example projects are available on the Internet that demonstrate the integration of MATLAB/Simulink subsystems with STEP 7 and WinAC ODK on a powerful PC-based controller with WinAC RTX.

These are provided as free downloads. [siemens.com/simatic-winac-odk](http://siemens.com/simatic-winac-odk)
SIMATIC S7-mEC
Rugged & modular embedded controller for DIN rails

SIMATIC S7-mEC is a modular embedded controller in S7-300 design with the latest embedded PC technology. This embedded controller combines the advantages of the tried and tested modular S7 controller with PC technology in one new device.

SIMATIC S7-mEC is characterized by:
- Maximum ruggedness without fan or hard disk
- Modularity and scalability, e.g. central expansion with S7-300 I/O and additional PC interfaces
- Commissioning, as for S7-300, by automation specialists

With the S7-mEC, standard Windows applications, applications in real-time environments, and standard PCI-104 cards can be integrated. For this purpose, it offers:
- A standard PC operating system Windows Embedded Standard and standard PC interfaces
- The latest embedded PC technology
- Openness in software and hardware

The modular embedded controller is particularly suitable for applications in which both control and data processing are of major importance. The most important applications of the S7-mEC are in special and series machine building, which also integrate additional automation tasks, e.g. HMI on one hardware platform, in addition to the control task. This means that centralized expandability with the standard SIMATIC I/O is still possible. The performance and openness of current PC technology can still be fully exploited.

The EC31 Embedded Controller is available:
- With Windows Embedded Standard operating system and Software Development Kit (SDK) for Windows programs
- Or with preinstalled SIMATIC automation software, such as the WinAC RTX (F) software controller or the WinCC flexible Runtime Advanced visualization software.

The EC31 is equipped with an integrated controller execution level system. Programming and diagnostics – as with all other SIMATIC Controllers – are performed with STEP 7.

The I/O bus interface enables signal modules (SM) and interface modules (IM) to be operated centrally for the multi-tier rack configuration. Operator control and monitoring can also be performed with installed HMI Runtime on a SIMATIC Thin Client which has access to S7-mEC data by means of standard TCP/IP mechanisms. Distances of 100 m or more can be spanned without difficulty.

### Advantages at a glance
- Combination of modular S7-300 controller and embedded PC technology
- Fanless and diskless S7-300 design
- Modular expansion with central S7-300 I/O modules and PC interface modules
- Configuration and programming as for an S7 Controller with STEP 7
- Simple integration of PC applications into the controller
- Retentive data memory

EC31 can be expanded with a wide range of different standard PC modules:
- The expansion module PC (EM PC) offers several interfaces, including a Gigabit Ethernet interface with separate IP address and two slots for memory cards
- The expansion module PCI-104 (EM PCI-104) has three slots for any desired PC modules (PCI-104 and PCI-104+), e.g. bus interface modules, instrumentation or video modules, as well as memory cards and sound cards.

The following can be used:
- One or two EM PCI-104 modules or
- One EM PC or
- One EM PC and one EM PCI-104

\(^1\) PROFIBUS optionally via CP 5603
Software packages and ready-to-run embedded bundles

If you decide to purchase a SIMATIC software product with your SIMATIC IPC you will save money.

You can choose between:
• turnkey embedded bundles, comprising an Embedded IPC complete with pre-installed and preconfigured SIMATIC software
• and software packages, comprising a SIMATIC IPC of your choice with accompanying software to install yourself.

SIMATIC Embedded Bundles

You can purchase embedded industrial PCs at special prices in the form of SIMATIC Embedded Bundles complete with a Windows Embedded operating system and pre-installed and pre-configured SIMATIC software. The devices are ready to use and are supplied with a backup CD/DVD which can be used to restore the delivery status at any time in the future.

Perfect interaction of hardware and software

SIMATIC IPC and SIMATIC S7-mEC are equipped with an integrated, non-volatile memory. Retentive machine data up to 128 KB (mEC up to 512 KB) can be saved and secured against loss in the event of power failure.

The onboard interfaces of the industrial PCs can be used by the SIMATIC WinAC software controller for connecting distributed I/O over PROFIBUS/PROFINET. The SIMATIC S7-mEC embedded controller can be modularly expanded for this purpose using SIMATIC I/O modules, such as a PROFIBUS card.

1) not for S7-mEC and IPC2x7D

Software packages

Even if you want to configure your SIMATIC IPC with SIMATIC software yourself, you can still save money: Order the hardware and software together. Software packages can be combined with all available SIMATIC IPCs. When any SIMATIC IPC is ordered together with SIMATIC software, a price reduction will be available. The following software products are available for selection for the software packages:
• For operator control and monitoring
  – SIMATIC WinCC Runtime Advanced (TIA Portal), including the option packages WinCC Logging and WinCC Recipes for implementation at the machine, or
  – SIMATIC WinCC flexible Runtime, including the option packages WinCC flexible/Archive and WinCC flexible/Recipes
  – SIMATIC WinCC V7 1), the SCADA system for process visualization
  – SIMATIC WinCC Runtime Professional (TIA Portal) 1)
• For open-loop and closed-loop control
  – SIMATIC WinAC RTX, the software controller for the PC
  – SIMATIC WinAC RTX F, the new fail-safe software controller

For further details, please ask your local SIMATIC contact: siemens.com/automation/partner

Original accessories for SIMATIC IPCs
More than standard – perfectly suited for industrial applications

SIMATIC original accessories ensure the reliability of your automation solution. They are system-tested with SIMATIC IPCs as well as SIMATIC programming devices and meet the high quality requirements with regard to EMC and functional application in industrial environments.

SIMATIC IPC USB FlashDrive
With the 8 GB SIMATIC IPC USB FlashDrive (USB 2.0) in SLC technology we offer you a fast and reliable memory medium for mobile data transport in a rugged metal housing.
Featuring ease of handling thanks to plug & play, the USB FlashDrive is flexible and ready for immediate use – also as a boot medium or in low-maintenance applications which have to do without floppy or optical drives.

SIMATIC IPC CompactFlash
Compared to hard disk drives, the application of the SIMATIC IPC CompactFlash (up to 16 GB) ensures safe data storage, particularly with higher temperatures and vibration and shock loads.
Using it makes you more independent of the market, because long-term availability of SIMATIC IPC CompactFlash is ensured. The CF cards with diagnostics capability can be monitored by the SIMATIC IPC DiagMonitor.

SIMATIC IPC Service USB FlashDrive
The 8 GB Service USB FlashDrive is an indispensable tool for installing, maintaining and servicing SIMATIC IPCs.
It allows all service tasks concerning the PC to be performed problem-free.

Central PC I/O
For especially high-speed and real-time-capable measuring tasks and open-loop and closed-loop tasks, the SIMATIC Microbox PC can be easily and flexibly expanded with centralized I/O.
Using PCI-104 expansion slots, encoders/counters as well as digital and analog I/O modules can be integrated in an expansion rack extremely compactly.
In the maximum configuration, this allows for the integration of up to 120 analog I/O, 320 digital I/O, and 12 encoder/counter interfaces.

It is ready to install thanks to preinstalled software products:
• SIMATIC IPC BIOS Manager for reading out PC information and updating the BIOS (downloading current BIOS versions).
• SIMATIC IPC Image & Partition Creator for quick and easy image transfer for initial software installation and restoration, backing up the PC installation created and partitioning.
More than standard – perfectly suited for industrial applications

Mounting kits for SIMATIC Box PC

With SIMATIC Box PCs, all interfaces are accessible from the front for user-friendliness. This means that cabling is easy and cost-effective and valuable installation space is saved.

The mounting kits for the Box PCs support a wide range of different installation angles and mounting variants:

- Mounting on DIN rails (optional for IPC227D/427C)
- Wall mounting with interfaces arranged on the left/right/top/bottom
- Portrait assembly with interfaces arranged on the bottom/top/front
- Side mounting

SIMATIC IPC keyboards / mouse / touch pen

Whether 19" slide-in, full-stroke or IP65 membrane keyboard: SIMATIC IPC keyboards are the ideal input devices.

Our rugged, ergonomically designed touch pen ensures optimum operating comfort. It is mounted in a special holder next to the Panel PC (cannot be detached).

The optical mouse based on innovative BlueTrack technology features a pleasant, anti-slip surface coating as well as three buttons and a large scroll wheel. Thanks to the symmetrical housing design and the accurate wire routing, it is suitable for both right-handed and left-handed operators. The mouse can be used without a mouse pad on many types of surface, such as granite.

Mounting kits for SIMATIC Rack PC

The SIMATIC IPC847C and IPC547D Rack PCs can be flexibly implemented thanks to:

- Removable 19" supports for use as Desktop IPC
- Tower kit for conversion to an industrial workstation or server, e.g. for control desks and technical offices

Further information about SIMATIC accessories:
siemens.com/ipc-expansion-components
Customized Automation
Perfectly tailored to individual requirements

Customized products from the SIMATIC portfolio offer you individual adaptations and expansions to the same quality that you expect from our standard products. That applies just as much to hardware modifications as to our sector products.

For the proven standard SIMATIC products (e.g. HMI, IPC, and S7), we carry out the modifications that are necessary in order to meet your requirements.

This ranges from minor design modifications to the hardware and the installation of customer images, special tests and certifications, to changes in service, support and logistics. Depending on the extent of the modifications, we distinguish between customized design, OEM solutions, and turn-key products.

High quality standards

Customer-specific products are developed and produced like standard products in accordance with the highest quality standards based on an individual product agreement with you.

Customized products – individual in design and configuration

Customized design

with visual modification of SIMATIC products for adjustment to your individual machine and system design, e.g. by modifying the company logo or enclosure color.

These design products are exactly the same as the standard products in terms of technology and functionality.

Product modifications for OEM customers

are individual solutions based on SIMATIC standard components. They are specified, offered, developed and supplied on an individual, customer-specific basis. SIMATIC OEM products are combined according to the building block principle from standard components, customer-specific components, and any additionally required software/function expansions.

Customer-specific turnkey products

These products, such as turnkey HMI operator panels, for example, comprise the complete wiring, all connections, enclosure solutions and suitable automation devices, including the required software. These solutions only have to be installed and connected to the power supply and data networks. All product modifications are specified, quoted, developed and supplied individually for the respective solution.

Sector products

For use in special sectors, SIMATIC products are optimally equipped with additional features:

- Renewable energies such as solar/photovoltaic plants and wind turbines
- General mechanical engineering, e.g. printing machines, drilling, milling and honing machines, brake test stands, injection molding machines, or bakery ovens
- Automotive industry, e.g. body construction, robot stations, operator stations at the production line, paint shops, or in the warehousing and logistics sector
- Food and beverage industry, pharmaceutical industry, e.g. stainless steel operating stations in the hygiene sector or quality control for production and packaging
- Oil & gas, the chemical industry and shipbuilding, e.g. operator stations in hazardous areas

Examples of customized products

With Digital Express Design, SIMATIC IPC277D operator panel fronts can be designed within just seven working days, even for small quantities.

The industry-standard fronts can be customized, even with images of photographic quality and resolutions of up to 600 dpi.

The SIMATIC HMI Net Panel is the new, intelligent 46" large-scale display, ideally suited to control rooms and production areas such as in the automotive industry.

Through standards such as Thin Client and Ethernet technology, the device is easy to integrate. It increases the plant performance by displaying specific KPIs (Key Performance Indicators) as well as providing audio support, e.g. for fault alarms with specific sounds.
Customer-specific software products

Individual software packages may include:
• Installation of customer images at the factory
• Generation of operating systems, such as Windows 7, Windows XP embedded, RMOS3 or Linux
• Integration and installation of driver software and image installation, e.g. for additional plug-in cards, controllers and memory media or for complete turnkey systems
• Specially for system integrators and plant constructors:
  – S7-Open Modbus TCP PN CPU: for plant-wide Ethernet communication in industrial and infrastructure automation
  – SOFTNET S7/LINUX, SOFTBUS/LINUX and SOFTBUS/LINUX RED: provide communications capability for IT islands in the industrial LINUX environment
• Remote Operate solutions with HMI software for industrial telecontrol based on Ethernet

Service for customized products

With special service and support concepts we provide you with comprehensive support from A to Z. The portfolio covers the entire product lifecycle and includes pre-sales and after-sales support, such as:
• Requirements analysis, concept creation, solution generation
• Competent project support from the offer through to delivery and beyond
• Individual repair concepts and a global service network
• 24-hour product support over the SIMATIC Hotline

Examples of sector products: Flexible industrial PC for mechanical engineering and turnkey HMI operator station

Online service tool PED – Product Equipment Data

With the PED service tool, you can identify and manage device and component data of SIMATIC IPCs/PGs online and worldwide at any time by means of standard Internet browsers.

Logistics for customized products

With individual logistics solutions for customer-specific products, you will receive agreements that are ideally tailored to your needs and which provide you with maximum planning security, for example, delivery and dispatch in accordance with Kanban or just-in-time.

Examples of individualized services

- Customer-specific certification and approval of hardware and software
- Product upgrades
- Configuration and design freeze: individual availability agreements for unchanged hardware and software versions of the products with image compatibility
- Replacement parts in centralized or decentralized spare parts storage: For individually agreed periods or, where applicable, last-time buying and storage of components
- Change notices: Individual agreements for customer information management, e.g. version updates, product discontinuation, phase-out announcements
- Individual labeling: On the device and/or product packaging, e.g. customized item/device/inventory numbers, warehouse barcodes or packing and safety instructions
- Supply of all accessories, e.g. adapter cables, keyboards or accompanying documents and manuals
- Kanban supply corresponding to the needs of the organizational units in the production sequence
- Just-in-time delivery of customer-specifically produced hardware at the exact time when it is needed in the production sequence or in the logistics chain
- Reuse of packaging instead of recycling: The packaging materials are reused for transporting the next delivery.

Online Configuration and Ordering Made Easy!

With the SIMATIC IPC online configurator, you can easily and individually assemble your industrial PC online in accordance with your requirements. Configuration faults are excluded thanks to the automatic plausibility check. The connection to the Industry Mall ensures the comfortable transfer of your data to the ordering process. The status indication provides information on the processing state of your order.

SIMATIC IPCs are available with pre-installed and activated Microsoft operating systems, e.g.

32-bit operating systems
- Windows Server 2003/2008
- Windows XP Professional
- Windows XP Embedded
- Windows Embedded Standard 2009
- Windows Embedded Standard 7
- Windows 7 Ultimate

64-bit operating systems
- Windows Server 2008 R2
- Windows 7 Ultimate

There is no need for the usual product activation over the Internet or by phone (in the absence of an Internet connection).

The industrial PCs are ready to operate immediately, and thus your commissioning overhead is minimized and you save time and costs.

Even after servicing, following reinstallation from the Restore DVD or Recovery DVD, Windows is immediately active.

Furthermore we ensure that you can continue to obtain your turnkey SIMATIC IPC even if the operating system is no longer commercially available, for example Windows XP.

Advantages at a glance

- Complete and up-to-date SIMATIC IPC product overview
- Easy selection and configuration – configuration faults are excluded
- All options at a glance
- Easy order placement via the Mall

Take advantage of these benefits and configure your SIMATIC IPC:
siemens.com/ipc-configurator
References for PC-based Automation

Requirement
AGCO GmbH, one of the largest manufacturers and suppliers of tractors and farming machinery worldwide, offers high-tech solutions for agriculture.

To introduce more efficient, resource-saving and therefore cost-effective production processes in the factory, AGCO has integrated a central, plant-wide machine data acquisition system using panel PCs. Due to the need for retrofitting in the existing environment, flexible and space-saving installation of the panel PCs was paramount.

Solution
More than 200 SIMATIC HMI IPC477C PRO panel PCs with all-round protection for central machine data acquisition with communications interfacing to the production machines and the production planning computer. Mounting of the panel PCs directly at the machine without additional control boxes on stand-alone columns.

Customer benefits
Enhanced efficiency by optimizing the complete production organization through a high degree of uniformity. Consumption of resources has been minimized thanks to low-paper manufacturing. Through the easy, cost-saving, retrofitting of the panel PC directly in manufacturing on a stand, there was no need for additional installation of a control desk, and the costs could be reduced.

Requirement
Heinrich Kuper GmbH & Co. KG is an internationally active, medium-scale company in woodworking and plastics technology based in Rietberg, Germany. It specializes in retrofitting older woodworking machines. The customer required modernization of his plant with the focus on drive systems and control technology to achieve high performance and precision as well as transparent diagnostics.

Solution
In the past, machines and plants for wood-working were equipped with specially developed, proprietary controllers. In the case of retrofit projects today, future-proof standard components are used. Specialists at the Kuper company decided in favor of integrating standard automation and safety technology in a single unit with the SIMATIC WinAC RTX F software controller in a fan-free and maintenance-free IPC, the SIMATIC IPC427C Microbox PC. PROFINET as an innovative fieldbus connects distributed I/O, safety and operator panels quickly and easily.

Customer benefits
The compact PC-based automation solution multiplies the performance and precision of the plant. Implementation of PROFINET resulted in a series of additional advantages such as the diagnostics capability. Integration of standard and fail-safe automation in a single unit achieved component savings. The size of the cabinet was reduced by 20 percent and the wiring by 50 percent. The customer benefited from a high level of operating convenience and minimized machine downtimes.

Reference video on the Internet at: siemens.com/reference-video-kuper
Innovative safety solution in PET bottle manufacturing

Requirement
With 20 years of experience in PET bottle manufacturing, beverage bottling and packing, SIPA Berchi of Parma, Italy has considerable expertise. The company required an innovative solution for the processes of blow molding, labeling, filling and sealing in the form of a PC-based solution with Safety Integrated.

Solution
Instead of a conventional controller, conventional safety cabling and a PC, the modular, PC-based embedded controller SIMATIC S7-mEC was implemented with the preinstalled, fail-safe software controller SIMATIC WinAC RTX F. The PROFINET fieldbus was used with SIMATIC ET 200S distributed I/O. Building on these innovative products, SIPA control tasks, Safety and visualization could be implemented on one integrated and rugged platform.

Customer benefits
SIPA Berchi benefited from an increase in performance for the PLC and HMI applications. SIMATIC WinAC RTX F reduced the time and costs for engineering because Safety was programmed using SIMATIC STEP 7 in the same manner as the standard PLC program.

Connecting the Safety sensors via PROFINET along with the concurrent reduction in cabling costs lowers the outlay both for new machines, and modernization. Use of a SIMATIC Thin Client as a low-cost operator station which is simply connected to the modular embedded controller via PROFINET brings further advantages.

Reference video on the Internet at: siemens.com/reference-video-sipa-berchi

High-performance industrial PC for reliable control and monitoring of wind power plants

Requirement
All Siemens turbines for offshore wind power plants feature special technical characteristics that ensure long-term, low-maintenance operation. In contrast to sites on land, offshore wind farms are not always accessible to service teams. The basic quality requirements and standards for all components used in terms of absolute fail-safety and reliability, are therefore extremely high.

Solution
The SIMATIC Box PC of the 627 series that has been implemented matches the requirements of the solution provider all the way down the line. The industrial PC is designed for 24-hour continuous duty at ambient temperatures up to 55 °C. For reliable operation, the Box PC is installed in a solid metal housing that is resistant to shock and vibration and that demonstrates a high degree of electromagnetic compatibility (EMC). For a high level of data security, the option of a mirror disk system with two hard disks (RAID1) was selected. The RAID1 controller is already onboard, and does not occupy a PCI slot.

The rugged, reliable hardware with extremely compact dimensions in durable industrial design also stands up to the demands of continuous operation in a harsh environment.

Customer benefits
Spanning device generations, the Box PC for universal applications offers identical mounting dimensions and fixing solutions as well as interfaces and function elements that are accessible from the front. When migrating to a successor product, there is therefore no need for adaptation to a new hardware platform. Through compliance with international standards, such as CE and UL, and worldwide service, the Box PC can be implemented round the globe.

References for PC-based Automation
Flexible test systems on a rack PC platform for worldwide use

Requirement
Automatic quality assurance systems from LXInstruments must check and document the quality of manufactured goods quickly and thoroughly. They must also be as cost-effective as possible, because they do not contribute directly to the value-adding process. A special characteristic and, at the same time, one of the greatest challenges for function test systems is that almost no two quality inspections or function checks are identical. Even the requirements of manufacturers in the same sector with similar products can differ totally.

Solution
The basis of the Open Test Platform (OTP) of LXInstruments is a SIMATIC Rack PC of the 547 series from Siemens. Seven PCI and PCI-Express slots offer sufficient opportunities for expanding the computer with special PCI instrumentation cards. The integrated Gbit LAN interfaces of the computer establish the connection to all the available instrumentation I/O. A RAID system is used to ensure that the data obtained from the measurements is stored securely. The controller required for this purpose is already integrated in the chipset of the mainboard, so it does not occupy any of the slots.

Customer benefits
For LXInstruments, the rack PC is an extremely reliable industrial PC with a high level of continuity regarding the interfaces and installation. High availability supports long-term investment security and even use in the next OTP generation. This gives planning certainty and saves costs due to simplified hardware tests.

Compact PC-based automation solution for induction soldering

Requirement
Germanflux-NOHA GmbH in Waldbrunn, Germany, markets the patented technique of focused infrared (FIR) radiation heating. An innovative solution was required for customers in the automotive, aerospace, traffic and energy technology, construction, plant machine construction and medical engineering sectors. A rugged easily certified platform was required on which several tasks (control, visualization, data processing) could be performed and that would obviate the need for a control cabinet for the operator terminal.

Solution
The compact PC-based automation solution comprises: a turnkey embedded bundle based on the Microbox PC SIMATIC IPC427 with the preinstalled SIMATIC WinAC RTX automation software for controlling the heating process, acquiring process data as well as conditioning and archiving data, plus SIMATIC WinCC for displaying diverse process variables. For displaying the process data and visualizing the heating processes, SIMATIC Flat Panel monitors are used with all-round protection to IP65.

Customer benefits
Important process data such as power, temperature and time can be reliably archived to verify the production quality over the long term. This simplifies certification of plants of this type. The open system of the rugged IPC427 enables further PC applications in addition to the automation tasks to be implemented in a compact manner on one platform. Costs for cabinets are reduced thanks to the SIMATIC Flat Panel monitors with all-round IP65 protection.
Step into the world of SIMATIC

This brochure has given you an initial overview of the extensive SIMATIC portfolio for factory automation – and of the advantages for you as a machine builder and plant operator. Further information on the individual families of systems can be found in the Internet sites listed below.

3) Restrictions when operating optical drives and swap frames
SIMATIC Rack PC – Flexible, powerful industrial PCs in 19” design

SIMATIC IPC547D

Design

19” rack, 4 HU

Installation

Prepared for telecontrol rack, for horizontal and vertical installation, 19” mounting bracket can be removed from the outside; tower kit (optional) for conversion to tower PC

General features

Processor

Intel Core i7 (7th Generation), 8 MB cache, Turbo Boost, VT-d, IOMMU, AMT

SIMATIC IPC647C

1 x 10/100 Mbit/s (with integrated 3-port switch, CP 1616-compatible), optional

/from 1 GB DDR3 1066 SDRAM (dual-channel support); 2 x DIMM, configurable up to 8 GB, ECC optional

Graphics

Intel HD 2000 graphics controller integrated in processor; Shared video memory up to 1.7 GB; dynamic video memory up to 1.7 GB, up to 2048 x 1536 pixels/64 bit; Intel GMAX4500 graphics controller integrated in chipset; dynamic video memory up to 512 MB; CRT: 1920 x 1200

Power supply / temporary voltage interruption

AC: 100-240 V, 50-60 Hz max. 20 ms (in accordance with NAMUR) AC, redundant: 100-240 V, 50-60 Hz, 60 ms (max. 20 ms) 

Operating system

Windows 7 Ultimate (64-bit)

Packages, bundles

Packages with WinCC flexible, WinCC V7, WinCC RT Advanced, WinCC RT Professional and WinAC RTX (F)

Drives

Hard drives (3.5” Serial ATA with NEC technology) / 5.25” high-Endurance

CD/DVD

### SIMATIC IPC627C

- **Design**: Box PC, built-in unit
- **Wall-mounted using supplied mounting bracket, portrait assembly using front panel (optional)** for mounting with the smallest surface in the control cabinet

### SIMATIC IPC827C

- **Design**: Box PC, built-in unit
- **Wall-mounted using supplied mounting bracket, portrait assembly using front panel (optional)** for mounting with the smallest surface in the control cabinet

### General features

- **Processor**:
  - Intel Core i7-610E (2C/4T, 2.53 GHz, 4 MB cache, Turbo Boost, VT-x/-d, iAMT, EM64T)
  - Intel Core i3-330E (2C/4T, 2.13 GHz, 3 MB cache, VT-x, iAMT, EM64T)
  - Intel Celeron P 4502 (2C/2T, 1.86 GHz, 2 MB cache)

- **Main memory**:
  - 1 x 1 GB DDR3 1066 SDRAM; DIMM; configurable up to 8 GB; ECC optional; retentive memory: static RAM 2 MB opt.

- **Graphics**:
  - Intel HD graphics controller integrated in processor:
    - Dynamic video memory up to 256 MB
    - DVI: 2048 x 1536 / 16 bit / 75 Hz

### Installation

- **Interfaces**:
  - 1 x 10/100 Mbit/s (with integrated 3-port switch, compatible with CP 1616), optional
  - 1 x 10/100 Mbit/s (isolated, compatible with CP 1616), optional
  - 1 x PCI (265 mm) and 1 x PCIe (175 mm) or 1 x PCI (265 mm) and 1 x PCIe (175 mm)
  - 2 x PCI (290 mm), 1 x PCI (240 mm), 1 x PCIe x4 (185 mm), 1 x PCIe x16 (240 mm)
  - 1 x Serial port
  - 1 x USB (2.0)
  - 1 x RS-232

### Operating system

- **Power supply / short-term Voltage interruption**
  - AC: 120/230 V, 50/60 Hz max. 20 ms (in accordance with NAMUR); 24 V DC: 20.4 ... 28.8 V

### Drives

- **Hard drives (3.5" Serial ATA with NCQ technology) / SSD / 3.5"
  - 250 GB; 500 GB; 2 x 250 GB, 2.5"; SSD 50 GB (SATA, High Endurance)
  - RAID1, 2 x 250 GB 2.5" (RAID controller onboard) with Zero-Maintenance Cache Protection Module (ZMM)

### Interfaces

- **Slot for CFC up to 8 GB (externally accessible); second CFC internally up to 8 GB (optional)**
- **Slot for CFC up to 8 GB (externally accessible); second CFC internally up to 8 GB (optional)**

### Drives

- **Promotional Kit IX (optional)**
- **Omega II (optional)**

### Other

- **Can be ordered separately**: RMOS3 V3.50 real-time operating system; project-specific: Linux®; others on request
- **Microsoft Windows 7 Ultimate (32-bit) 1)
  - Windows XP Professional (32-bit) 1)
  - Windows Embedded Standard 2009 (on CF)
- **Can be ordered separately**: RMOS3 V3.50 real-time operating system; project-specific: Linux®; others on request

### Additional information

- **Systems configuration**: For further details, see SIMATIC Guide manuals:
  - www.siemens.com/automation/partner
  - www.siemens.com/industrialsecurity
  - www.siemens.com/ipc-configurator

- **For more on the topic of industrial security, visit**:
  - www.siemens.com/asis

- **For more information on SIMATIC IPC and the management of your field inventory**: Online Service Tool PED – for fast information on the equipment of your SIMATIC IPC and for universal use.

### Technical Specifications

#### Ethernet
- 2 x 10/100/1000 Mbit/s (RJ45), teaming-capable

#### USB
- 4 x USB
- 4 x USB (2.0 high-current)

#### COM1
- COM1
- Serial / Parallel

#### Connection via USB Interface
- Connection via USB Interface

#### Audio
- Audio

#### Monitoring / diagnostics functions
- Temperature, fan, watchdog, HDD, RAID, CF, SSD, CMOS battery (alarm locally by means of SIMATIC IPC DiagBase software)
- Temperature, fan, watchdog, hard disks (SMART)
- System/Ethernet monitoring + Operating hours counter
- SNMP and OPC interface (optionally via SIMATIC IPC DiagMonitor software)
- Via Intel Active Management Technology (AMT) 6.0 and SIMATIC IPC Remote Manager

#### Front LEDs
- Two LEDs, bi-colored; two 7-segment displays; freely programmable

#### Ambient conditions
- IP20
- Protection class I compliant with VDE 0106 Part 1 (IEC 536)
- 10 ... 58 Hz, 0.075 mm; 58 ... 500 Hz, 9.8 m/s² (approx. 1 g)
- 50 m/s², 30 ms (approx. 9 g)
- 5 ... 90% at 25 °C (no condensation)
- 55 °C/50 °C / 5 ... 45 °C (10 W on PCI / 20 W on PCI / maximum configuration)

#### Electromagnetic compatibility (EMC)
- EN 61000-6-3, EN 61000-6-4, CISPR22: 2004 Class B, FCC Class A
- ± 2 kV (IEC 61000-4-4, burst), ± 1 kV (IEC 61000-4-5, surge symm.), ± 2 kV (IEC 61000-4-5, surge asymm.)
- ± 6 kV contact discharge (IEC 61000-4-2), ± 8 kV air discharge (IEC 61000-4-2)
- 10 V/m, 10 KHz to 80 MHz (IEC 61000-4-6)

#### Approvals/guidelines
- AC: EN 60950-1; UL 60950-1, CAN/CSA-C22.2 No. 60950-1-03 DC: EN 61131-2; UL 508, CSA C22.2 No. 142
- CE mark/EU directives, approvals

#### Dimensions and weight
- 298 x 100 x 301 mm (incl. mounting rail);
- 298 x 80 x 301 mm (incl. mounting rail, without optical drives)
- 298 x 175 x 301 mm (incl. mounting rail);
- 298 x 155 x 301 mm (incl. mounting rail, without optical drives)
- Installation dimensions (W x H x D)
- Approx. 7 kg
- Approx. 9 kg

### Notes
- Restrictions when operating optical drives and swap frames
**SIMATIC IPC277D – Maintenance-free and optimized performance with Intel Atom processors**

### General features

- **From 1 GB DDR3 1066 MHz SRAM; SODIMM; configurable up to 4 GB**
- **1.2 GHz; 800 MHz FSB, 3 MB L2 cache, ultra low voltage CPU**
- **Intel Core i5-2500 (2C/4T, 2.7 GHz, 6 MB cache); Intel Core i3-330M (2C/2T, 2.13 GHz, 3 MB cache); Intel Core i3-560 (2C/2T, 3.33 GHz, 4 MB cache, Turbo-Boost, VT-x, AES, VT-d, SMRAM)**
- **1 x front USB 2.0 high-current, 4 x rear USB 2.0, 2 of which high-current**
- **Central / distributed configuration**
- **Typically 50,000 h (depending on temperature when operated continuously for 24 h)**
- **50 ... 80% at 25 °C (no condensation)**
- **Typically 50,000 h (depending on temperature when operated continuously for 24 h)**
- **Typically 50,000 h (depending on temperature when operated continuously for 24 h)**

### System monitoring

- **Operating hours counter for preventative maintenance, maintenance mode, networking (LAN); SNMP and OPC interface (optionally via SIMATIC IPC DiagMonitor software)**
- **SNMP and OPC interface (optionally via SIMATIC IPC DiagMonitor software)**
- **via Intel AMT 6.0 and SIMATIC IPC Remote Manager**

</tbody>
</table>

### Graphic interface / keyboard / mouse

- **Pouya’s backlighting**
- **Windows Embedded Standard 7 / Embedded Standard 2009 (eng.) on CF Card / Windows 7 Ultimate (32-bit), Windows XP Professional (MUI 2)), opt. without operating system**
- **Windows 7 Ultimate (32-bit); Windows XP Professional (MUI 2)); Windows Embedded Standard 2009 (eng.); optionally without operating system**
- **Typically 50,000 h (depending on temperature when operated continuously for 24 h)**

### Drives

- **Free expansion slots**
- **Central / distributed configuration**
- **10 x 100/100 Mbit/s (autorange)**
- **1 x front USB 2.0 (high-current)**
- **1 x USB-A 2.0 (high-current)**
- **1 x front (USB 2.0 high-current) / 2 x rear (USB 2.0, 2 of which high-current)**

### Interfaces

- **2 x onboard, 10/100/1000 Mbit/s, RJ45, teaming-capable**
- **2 x onboard, 10/100/1000 Mbit/s, RJ45, teaming-capable**
- **2 x onboard, 10/100/1000 Mbit/s, RJ45, teaming-capable**
- **DVI-I for additional display unit / connected via USB ports**
- **USB 2.0 (high-current)**
- **Onboard, isolated, max. 12 Mbit/s, compatible with CP 5611**
- **Onboard, isolated, max. 12 Mbit/s, compatible with CP 5611 (optional)**
- **Onboard, isolated, max. 12 Mbit/s, compatible with CP 5611 (optional)**

### Monitoring / diagnostics functions

- **Temperature, fan, watchdog, HDD, RAID, CF, SSD, CMOS battery (alarm locally by means of SIMATIC IPC DiagBase software)**
- **System monitoring: Operating hour counter for preventative maintenance, maintenance mode, networking (LAN); SNMP and OPC interface (optionally via SIMATIC IPC DiagMonitor software)**
- **Temperature, fan, watchdog, HDD, RAID, CF, SSD, CMOS battery (alarm locally by means of SIMATIC IPC DiagBase software)**

### Optical drives

- **1 x 12 Mbit/s (isolated, compatible with CP 5611)**

### Packages, bundles

#### Slots

- **1 x PCI (265 mm) and 1 x PCIe x16 (175 mm)**
- **1 x PCI (265 mm) and 1 x PCI (175 mm)**
- **Slot for CFC up to 8 GB (externally accessible); second CFC internally up to 8 GB (optional)**
- **250 GB; 500 GB; 2 x 250 GB, 2.5"; SSD 50 GB (SATA, High Endurance)**
- **RAID1, 2 x 250 GB 2.5" (RAID controller onboard)**
- **Serial Attached SCSI (SAS)**
- **none;**
- **none;**
- **Hard drives (3.5" Serial ATA with NCQ technology) / SSD / 3.5"**
- **RAID1, 2 x 250 GB 2.5" (RAID controller onboard) with Zero-Maintenance Cache Protection Module (ZMM)**
- **Slot for CFC up to 8 GB (externally accessible); second CFC internally up to 8 GB (optional)**
- **Intel Core i7-610E (2C/4T, 2.53 GHz, 4 MB cache, Turbo Boost, VT-x/-d, iAMT, EM64T)**
- **Intel Core i3-330E (2C/4T, 2.13 GHz, 3 MB cache, VT-x, iAMT, EM64T)**
- **Intel Celeron P 4502 (2C/2T, 1.86 GHz, 2 MB cache)**
- **Intel HD graphics controller integrated in processor; Dynamic Video Memory up to 256 MB; DVI: 2048 x 1536 / 16 bit / 75 Hz**
- **none;**
- **none;**
- **1 x 10/100 Mbit/s (with integrated 3-port switch, compatible with CP 1616), optional**
- **PROFINET compatible with CP 1616)**
- **procedures according to EN 50155 and EN 61373;**
- **procedures according to EN 50155 and EN 61373;**
- **2 x 10/100 Mbit/s (network switch, optional)**
- **2.5" (6.35 cm) Serial ATA (SATA) hard drive, 250 GB; 500 GB; 2 x 250 GB, 2.5"; SSD 50 GB (SATA, High Endurance)**
- **2.5" (6.35 cm) Serial ATA (SATA) hard drive, 250 GB; 500 GB; 2 x 250 GB, 2.5"; SSD 50 GB (SATA, High Endurance)**
- **2 x 2.5" (6.35 cm) Serial ATA (SATA) hard drives (250 GB each, 5400 rpm, 2 MB cache); optional:**

### Interfaces

- **PROFIBUS/MPI**
- **Ethernet (10/100 Mbit/s), optional**
- **Power supply / short-term voltage interruption:**
  - **AC: 120/230 V, 50/60 Hz/max. 20 ms (in accordance with NAMUR); 24 V DC; 20.4 V ... 28.8 V**
- **Operating system:**
  - **Microsoft Windows 7 Ultimate (32-bit / 64-bit)**
  - **Windows XP Professional (32-bit)**
  - **Windows Embedded Standard 2009 (on CF)**
  - **Can be ordered separately: RMOS3 V3.50 real-time operating system; project-specific: Linux 6), others on request**
